NUMBER 8

Final Action Taken By the Council For the Completion of the City Waterworks

MISS JENNILLE HAILE AND HUGH McMILLAN WED

On Monday afternoon at five o'clock, the wedding of Miss Jennille Haile and Mr. Hugh McMillan was solemnized at the home of the bride's sister, Mrs. Kenneth McPherson. The ceremony was performed by the Rev. E. D. Visor, Pastor of the Maitland Presbyterian Church, in the presence of the immediate family.

The bride was attired in a gown of taupe chiffon with a pink straw hat and carried a bouquet of lilies-of-the-valley. Miss Lois Haile, who attended the bride, wore a gown of grey georgette and carried pink roses. Mr. Harold Haile acted as groomsman. Mrs. Rogers played the wedding march and Mr. McPherson and Mrs. Lull sang.

The bride, who is the daughter of Mr. and Mrs. H. F. Haile, well known residents of Maitland, has been teaching for the past few years in Gastonia, N. C. where Mr. McMillan is engaged in the automobile business.

After the ceremony the young couple departed immediately on a wedding trip and will make their home in Gastonia.

COUNCIL MAKES TRIP TO DELAND

Members of the council and other city officials and prominent citizens of Maitland motored over to DeLand Sunday to inspect the working of two types of pump now in operation by the city of DeLand and a third pumping outfit just being installed. The engineers of the plants operated both outfits for our benefit and explained the construction, mechanism and operation of each, the advantages and disadvantages, so that the committee could get an idea and understanding of their respective merits as a basis for making a selection of the type of outfit most suitable and desirable for Maitland.

WEDDING OF MISS NANNIE HARRIS AND WILLIAM L. GOETTE

A wedding of great interest to the people of Maitland was that of Miss Nannie Harris of Winter Park to William L. Goette, which took place last week Thursday at the home of the bride's parents, Captain and Mrs. J. A. Harris.

Mrs. Goette is well known to most of the readers of the News, either personally or through her splendid work as Assistant Principal of the Winter Park High School, while additional interest is due to the fact that she is the sister of Mrs. C. J. Woodward of this city.

All who know of the high place which Mrs. Goette holds in educational circles will be pleased to learn that as Mr. Goette is a school man, being principal of the Eustis High School, her influence and interest in the educational work of the state will continue to be felt.

WORK STARTED ON NEW TOWN HALL AND FIRE HOUSE

At a recent meeting of the Town Council a contract for the erection of a modern combination Town Hall, Fire House and Jail was awarded to Geo. B. DeNoyelles.

This building will be of hollow tile and stucco and will be located on a lot owned by the town between Independence Lane and Inter street. The building will be placed on the back of the lot facing Independence Lane on the west. This arrangement will leave the remainder of the grounds available for beautification by lawn and appropriate shrubs.

On the lower floor will be located the fire house with room for the accommodation of the new Boyer Fire Engine recently purchased, the municipal offices and space for town equipment. Located at the rear of the first

(Continued on Page 4)

TOWN PURCHASES PUMPING EQUIPMENT FOR WATER- WORKS SYSTEM

At a meeting of the Town Council Tuesday evening the 22nd a contract was entered into with the Layne-Southeastern Company, of St. Petersburg, Florida, state representatives of the Layne & Bowler Company of Memphis, Tennessee, for a modern electrically driven deep well pump for the municipal water system.

This unit will be of the most modern in every respect, being driven by a 50 H. P. direct connected, vertical, General Electric motor with full automatic control. This automatic feature will obviate the necessity of having a full time attendant at the pumping station, because of the fact that when the tank reaches a certain low level the pump will automatically start, and when the tank reaches a certain high level the pump will automatically stop. An inspection of a few minutes a day for the purpose of oiling will be all the attention necessary as the motor will be also equipped with a device protecting it against low voltage current.

The capacity of this pump will be 500 gallons per minute, the water being forced directly into the tank 100 feet in the air by the six impellers located 65 feet below the surface and connected with the pump head by shafting, fully encased.

Delivery of this equipment cannot be expected in less than six weeks so the manufacturers state, thereby necessitating some further delay in the actual turning on of the water.

The final work connected with the laying of the mains and installation of fire hydrants will be completed in a few weeks.

This will complete the installation of the water system which has been unavoidably delayed by various causes. First the freight embargo held up

BUILDING IN FLORIDA

We note with interest certain statistics quoted in the last issue of the Winter Park Herald, which we should judge to be a pretty good indication of the intrinsic soundness of Florida today. According to the figures given the amount of freight shipped into Florida by rail through Jacksonville in the first quarter of 1926 exceeded the shipments for the same period in 1925 by 58.5%, and in 1924 by 102.9%. And this in spite of the embargo which, as we all know too well, cut down the consumption of outside commodities by practically everyone who was a resident of Florida at that period.

Of equal interest is the record of building and engineering contracts which for the first four months of 1926 amounted to \$112,604,600.00; an increase of 127% over the \$49,552,400.00 of the corresponding period of 1925, while the April figure was the highest on record for that month, 92% more than last April.

We feel that this information comes very timely after our article of last week on the increase of buildings in Maitland during the past year, showing, as it does, that our local conditions are reflecting truly those which are general through the state.

Two of the aspects of this construc-

tion program are especially noteworthy. One is the fact that a large part of the construction is of a public character. Here in our immediate vicinity we have the new Court House, Station, Auditorium, Coliseum, Telephone Exchange, Y. M. C. A. building, besides schools and churches, in Orlando—a new high school in Winter Park—not to mention our own municipal building—together with an extensive road program in both Orange and Seminole counties, including the practical rebuilding of state highways No. 2 and 3—the latter being the famous Black Bear Trail, a federal military highway, running from Quebec to St. Petersburg and Miami, and including Maitland among its points of interest.

The other feature is that a large proportion of the capital being used in the private enterprises comes from northern financiers, who, while at the moment they appear shy about investing in Florida real estate, are placing their money here in substantial business enterprises, which will be of permanent value in the development of the country, thus showing that their confidence in the future of Florida is unshaken.

Mr. and Mrs. H. E. Milliman and daughters spent several days last week at St. Petersburg.

DR. S. C. HARDWICK PASSES AWAY IN NORTHERN HOME

Just as we go to press we receive word that Dr. S. C. Hardwick passed away at his northern home on Wednesday, June sixteenth.

This news will come as a great shock and grief to the many friends of Dr. Hardwick in Maitland, who will join the News in offering their sincere and heartfelt condolences to Mrs. Hardwick.

FINAL ACTION TAKEN BY COUNCIL FOR COMPLETING WATER WORKS

(Continued from Page 1)

shipments of cast iron pipe for several months, then the well drillers were held up in getting their drilling equipment on the ground, not until the well was completed and the test made, could a complete log of the well be forwarded to the engineering company's offices in Atlanta for recommendations and specifications for the type of pumping equipment to be used. After receipt of these specifications it was necessary, by law, to advertise for thirty days for bids on this equipment, which brings us up to the present time.

If everything goes well from now on prospective water consumers may reasonably expect service by the middle of August.

WORK STARTED ON NEW TOWN HALL AND FIRE HOUSE

floor will be two modern jail cells.

On the second floor will be located an assembly hall for the uses of the town council.

Construction has already started and the structure will be completed by September first according to the terms of the contract.

CITRUS CULTURE—SPRAYING (Forrest B. Stone)

This is the time of year when the citrus grower has to watch his trees and young fruit very carefully as the little pest known as the rust mite is about to put in his greatest work. Damage done by this insect lowers the grade of fruit in two ways; it makes a rusty appearing fruit which detracts from its appearance a great deal and reduces its value fifty or more cents per box; it also prevents the fruit from maturing to its normal size. Last year there was not a great amount of damage done by the rust mite as it seemed to be an off year, consequently there is likely to be an over supply of them this year. Just at present conditions indicate that they are more plentiful than they have been in years and it behooves every orange grower to spray or dust just as soon as they appear in any quantities. A

heavy lime sulphur solution seems to give the best results and will last over a much longer period than the dust, however it is not possible to apply same as rapidly and where you have large acreage the dust seems to be preferred. The spraying should be repeated two or three times or as often as necessary to control the mite.

For white fly and scale if they are to be found in any quantity the grove should be sprayed at once with an oil spray as it keeps the trees clean and gives them better breathing facilities.

HOW A BANK STRIKES A BALANCE

In the introduction to this series of articles on banking, reference was made to the many interesting things that go on behind the cage. I regret that lack of space in each issue of this paper causes each article to be practically a summary, but it can't be helped.

The balance of a set of books is of primary importance, since it proves that each account is correct, (except in cases of cross-errors which are rare.) Bank bookkeeping differs only in detail from any other form of bookkeeping and is simply a matter of credits and debits.

In opening a set of bank books, the capital stock and surplus constitute a credit on one side, and the cash on hand and the cost of banking house and fixtures are the balancing debit on the other side. Deposit slips, cashiers checks, bank drafts and interest all go on the credit side of the books, and the checks and cash received for credits mentioned constitute the debit to offset the credits.

At the end of the day all of the credits, the deposits, the cashiers checks and drafts, and the interest together with the cash carried over from the previous day are added up and a total obtained. The debits, checks, notes, and cash for the day must equal the total of the credits, or the bank is out of balance and the difference must be found.

All checks on other banks are sent away for collection. In the case of a small bank, the foreign items, as they are called, are usually deposited in a larger bank from which they are in turn sent out to the banks on which the checks are drawn. It is not unusual for a check to go through four or five different banks before it reaches its destination, and it may be in the mails for several days.

In posting the accounts, each check and deposit must be handled five or six different times. For instance: suppose John Smith has a balance of \$1,000.00 and draws three checks for \$100.00 each and makes two deposits for \$150.00 each. These items must be listed and proved, the deposits added to his balance on two different sheets, (ledger sheet and statement sheet) and the checks subtracted from the total on these same sheets. His new balance will be the same \$1,000.00, but twenty separate transactions have been made to reach that new balance.

It is indeed a blessing that the banks of today have the use of accurate bookkeeping machines without which the intricate bank bookkeeping could not be performed.

Bank of Maitland.
