HOW WOULD YOU LIKE TO COOK IN COMFORT?

You can cook all day long with electricity, yet you will notice hardly any rise in the temperature of your kitchen.

Why? ... Because electric heat works on the bottom of your pots and pans or is sealed up in the oven where it belongs. This is true because electricity is the only kind of a cooking fuel that does not need a draft ... and drafts carry the hot air up into the kitchen.

Keeping the kitchen cool is not the only thing an electric range will do well. It will cook when you are miles away, it will save the vitamins in your food, and will do away with guesswork because electric cookery results are always certain. Your electric range can save you more time, work, worry and discomfort than any other home appliance.
