

PLANS MADE FOR AROUND WORLD EDUCATION TRIP

More Than 600 American Students Will Go On Long Journey

NEW YORK, May 17.—Plans for a \$5,000,000 trip around the world by more than 600 American college students, to sail from New York in October and return in May, and to be joined enroute by students from England, Germany, Norway and Italy, are being made by a group of nationally known leaders and by men and women prominent in the social, educational and business life of this and other states, it was learned today.

Sponsors Arthur Capper of Kansas, and Ropal B. Copeland, of New York, Secretary of Labor William N. Doak, Mrs. Ruth Bryan Owen, Mrs. Carrie Chapman Catt, Henry J. Allen, former governor and senator from Kansas, and Mrs. Allen, together with others well known here are included among the patrons of the movement, which is designed to broaden the outlook of American university men and women and give them first-hand knowledge of foreign peoples, places and conditions, without loss of time in their regular college work.

A trans-Atlantic ocean liner, equipped with study halls, lecture rooms, science laboratories, auditorium, library, gymnasium and swimming pool, and chartered for the exclusive use of the "American Floating University," will serve as home and campus for the students during the eight months, or two college semesters spent on the world tour. Forty-three countries, sixty-one ports and 100 additional places of international significance will be visited and studied.

The University World Tour will be under the direction of a board of trustees of which Dr. Stanley F. Woodward of New York City is chairman, and which includes Charles K. Cooper, treasurer of the Santa Fe Railway, Dr. Charles P. Thwing, president-emeritus of Western Reserve University, Dr. John L. Merrill, president of All America Cables, and Dr. James E. Lough, former dean and director of extra-mural activities at New York University. Headquarters have been established at 96 Fifth Avenue, New York City.

A faculty of fifty-five professors and instructors, most of whom will be on sabbatical leave from American colleges, is now being assembled by Dr. Lough, under the direction of the board. Classes corresponding to those in the usual college curriculum will be held regularly at sea, supplemented by field trips in the various countries visited.

The students will be selected for the tour on the basis of character and scholastic standing, with a quota assigned to each state in proportion to the number of college students resident in the state. Because of the international aspect of the movement and the interest shown by foreign governments and university groups, a special effort will be made to have the student body represent the best in American college life, it said. Patrons and patronesses are now being chosen here and in other states to aid in making these selections.

The quota allotment allows for 85 students from the Pacific Coast; 95 from the Western states; 115 from the Middle West; 100 from the South; 125 from New York and the Middle Atlantic states; and 100 from New England.

Crape Myrtle Mildew Stopped By Spraying

GAINESVILLE.—Crape myrtle mildew can be stopped by spraying thoroughly with a 1-80 commercial lime-sulfur, according to Erdman West, mycologist with the Florida Experiment Station.

The mildew can be distinguished by a white powdery coating over the young leaves and shoots. This coating will cause the leaves and flowers to be deformed, and in severe cases will prevent the plant from blooming. The fungus which causes the coating is readily killed by the lime-sulfur spray.

Story Told Of Early American Currency

NEWARK, N. J.—The story of early American money is told in an interesting exhibit at the Newark Museum, as part of the larger exhibit of Colonial days in honor of the Washington Bicentennial. The exhibit includes the coins, tokens, paper money and types of money used in this country as a means of exchange during Washington's time. Among other items are the first silver coin, the first paper money, and the first gold coin.

Traveling Around America

"SANTA PAULA" AND SPONSOR

Officials of the Grace Line have announced that Mrs. Edward T. Ford of San Francisco, wife of the President of the Panama Mail Service of the Grace Line, will be official sponsor of the "Santa Paula," new Grace liner which is to be launched in Kearny, N. J., on June 11th. The "Santa Paula," with her sister ship, "Santa Rosa," which President Hoover with a touch of an electric button sent sliding down the ways on March 21st and two other \$5,000,000 ships now under construction will enter Grace Line's New York-Central

Commission To Seek By New Means Causes Of Depression, Prosperity

NEW YORK, May 17.—Formation of the Cowles Commission for Research and Economics, a non-profit-making organization, was announced by Mr. Alfred Cowles 3rd here recently. The commission will undertake to analyze by new methods the causes of the business cycle, with its alternating periods of prosperity and recession, the announcement said. These new methods will be along the line of "econometrics," which was defined as "a combination of higher mathematics and economics." By these means the commission will attempt to discover means of interpreting and, hence, of stabilizing the course of the business cycle.

The commission's advisory council, elected by vote of members of the International Econometrics Society, is composed of Prof. Irving Fisher of Yale University; Prof. Wesley C. Mitchell of Columbia University; Mr. Carl Snyder of the New York Federal Reserve Bank; Mr. A. L. Bowley of the London School of Economics, and Mr. Ragnar Frisch of the University of Oslo. The research director is Mr. Alfred Cowles, 3rd, who, in 1925, joined with other members of his family in establishing the Alfred Cowles Foundation for the study of government at Yale University. The commission is to be housed in the library building now being erected at Colorado College, Colorado Springs.

"The first project of the commission, work on which is already started, is a mathematical analysis of the relations existing between money rates, business activity, commodity prices and security prices and 100 such varied factors as consumption of wood pulp, price of agricultural implements, rubber imports, corporate dividends

Daniels Sees Land As Holding Great Investment Worth

RALEIGH, N. C.—The man who has money and buys land at the present prices is going to make a wise investment," declared Josephus Daniels, Raleigh publisher and former Secretary of the navy. Mr. Daniels' statement was prompted by the current general tendencies to "look to the land" as a solution to the present economic distress.

"The mudsill of all property," Mr. Daniels said, "is the land. Every factory and every railroad must, like Antaeus of old, firmly fix itself to the land. In the panic of the early nineties, when cotton was bringing four and five cents a pound, agricultural land went down to a very low level. Most people with money declined to buy it. At that time Mr. Matt W. Ransom, Ambassador to Mexico, seeing the conditions and having faith in the restoration of land values, invested every cent he could save and obtain in buying cotton land in Northampton county. He became one of the largest land-owners in the South. Within a comparatively few years after his purchases these lands rose so that if his heirs had sold at the prevailing price in 1917-1918 they would have been independently rich.

Harrison Saunders, heir of the estate, made a record while serving overseas as commander of the 12th Aero Squadron. He received the Distinguished Service Cross and was cited for the Croix de Guerre. The house contains many relics and historic treasures that have never been on view to any except friends of the family. A distinctive feature is the library, which is an entirely separate building and a perfect architectural specimen in every respect. It also is filled with many documents and mementos of historic value.

JAPANESE QUAKE DEADLY

BATAVIA, Java, May 17.—(A.P.)—A severe earthquake in the Meno district of the island of Celebes resulted yesterday in a casualty list of five known dead and 20 injured. Much property damage was done.

Cotton Growers Told How To Help Relieve Troubles

MONTGOMERY, Ala.—Mr. Frederick E. Murphy, publisher of the Minneapolis Tribune, and his farm editor, Mr. Charles F. Collier, in addresses here, told farmers how they may provide themselves with "farm relief" by adding pigs, cows and chickens to their cotton production. Impetus was given to the proposal to establish a livestock bank here.

Mr. Murphy declared that every dollar of wealth produced on the farm means \$10 worth of business in the city. A realization of the interdependence of city and farm, he said, led the Tribune 10 years ago to inaugurate a twofold campaign to develop a better agriculture suited to soil and climatic conditions, and to educate the business man to an appreciation of the fact that his whole existence was dependent on the farm. Mr. Collier, who was in charge of the program sponsored by Mr. Murphy, described the "10-year plan" as follows:

First survey the community to find out what kind of agriculture is successful. Get the business men of the community to lend their genius for organization, cooperation and leadership to the farmer. Provide means to finance the farmer who wants to change over from the wrong kind of farming to the right kind. The farm editor said over half of the immense gains in income received by northwestern farmers came from livestock, including cows, hogs and sheep. Poultry raising also came in for a share.

Great Possibilities Seen In Dixie Woods

AUBURN, Ala.—Until the South takes advantage of opportunities for the production of white paper from pine trees, losses totaling well into the millions of dollars annually, will be incurred to the detriment of every kind of business, Dr. Charles H. Herty, New York consulting chemist of the Alabama Polytechnic Institute, said here. The United States, he said, imports annually paper and paper

products to the value of \$250,000,000. All this paper could be produced in the South from young pines removed from growing forests and thereby provide for greater growth of the trees left standing.

Dr. Herty declared that the South has distinct values in the production of timber because of a longer growing season which causes greater growth each year. He said that an acre of slash pines in Alabama should produce two cords of pulp wood annually. He valued this wood at \$10.

Lehmann Speaks To Orlando Body At Meet Today

(Continued From Page One) ing a 175-acre municipal airport fully paid for and providing adequate facilities for ships of every type.

Agriculture continues to be the chief source of revenue and resource of Seminole County, Mr. Lehmann told the gathering. He again stressed the fact that this county produces one-fifth of the celery grown in the United States annually, and that \$6,000,000 a year is the gross value of the crop, half of which sum is paid railroads alone. "While the farmer has received a mighty small return for his crop this season," Mr. Lehmann said, "our Chamber of Commerce has aided in laying the foundation for an increased number of celery consumers by securing the active co-operation of 20 of the leading railroads of the United States who have agreed to feature Florida celery on their dining car menus."

Sanford and Seminole County as a rapidly growing industrial community was next pictured by Mr. Lehmann who reported that during the past year, several new industries began operation. Among them he said were the Ekerson Fruit Canneries Inc., plant where more than 400 persons were employed at the height of the season, where an average of \$6,000 weekly was spent for labor and fruit, and where one-tenth of the grapefruit canned in Florida this season was produced. Mr. Lehmann told of the establishment of a new cold storage

plant for gladiolus bloom and bulbs, erected by W. E. Kitchoff, one of the most prominent bulb marketers in America, operating in Oregon, New York, Virginia, and Seminole County.

He explained how the Wakefield Preserving Co., at Geneva has greatly increased its distribution through the co-operation of the trade body, which secured for this concern an initial order of marinated jellies and jams, that has brought repeat orders totaling more than 500 dozen jars.

Among the major activities set in motion early last year, and now bearing fruit, Mr. Lehmann said, were the efforts to build and repair major highways in the county. Only yesterday, Mr. Lehmann said, the State Road Department received bids for the reconstruction of the Lake Shore Boulevard on State Road No. 3, with construction is expected to go forward this summer. Rock has arrived and the crews are laying it along,

and otherwise regarding State Road No. 204 between Ocala and Winter Park and Orlando, while another crew is at work on the fill on State Road No. 44 between Titusville, Mims and the St. Johns River, closing the last gap in this road between Mt. Dora and the East Coast.

Concluding, Mr. Lehmann said that water transportation is one of the most important factors in the development of any city fortunate enough to be situated accessible to it, and while traffic on the St. Johns River has made material gains, the people of the entire area are working toward a canal connecting the St. Johns and Indian Rivers.

He extended a special invitation that every person present bring his family to Sanford on Farmer's Day, to enjoy the many educational and recreational features which have been arranged for the amusement of an anticipated 15,000 persons.

SERVICE Best Wishes

Farmers

It's simply wonderful to eat delicious food amid the pleasant breezes of an inland Florida lake. For this combination the Celery Club can't be beat.

Our chicken and juicy steaks are the best in town. Noon-dinner lunch, 50c and 75c; evening dinner, 75c and \$1.00; and Sunday dinner, 75c and \$1.00.

SITUATION OF HEALTH CAUSES IS DOWN IN REPORT

Many Diseases Which Took Toll 30 Years Age No Longer Rate

NEW YORK, N. Y., May 17.—A report issued today by the United States Public Health Service is being waged all the way between two contending camps. One team is composed of the diseases that afflict mankind, the other is the general public, eached by medical and sanitary science and public health measures. The report is shown by the record kept in the registration area. This record, from 1900 to 1929, is translated by statisticians for the general public into a tabulated box.

Statisticians of a life insurance company recently completed a tabulated box score which is a comparison of the relative rank of the 20 leading causes of death at the beginning of the century and at the end of the third decade. In comparison, published in the insurance company's statistical bulletin, throws an interesting light on the struggle between disease and the forces fighting for public health. In the tabulation certain diseases, which 30 years ago ranked high in their list of human life, today do not appear at all into the accounting of important causes, while others which assume high positions in the list today were not included among the outstanding causes at the beginning of the Twentieth Century.

"The most conspicuous example of a disease which has utterly disappeared as a leading cause of death is typhoid fever," says the bulletin. "Thirty years ago it ranked fourteenth on the list. Now typhoid fever is a vanishing disease, which takes a toll of only 2.4 lives per 100,000 of population, instead of 26.5 lives. The reduction in its mortality rate is one of the greatest triumphs of modern sanitary science. The problem now presented by this disease is almost entirely one of rural sanitation.

"Little importance attaches to the fact that items like 'meningitis,' 'convulsions,' 'old age,' 'ill-defined causes,' 'congenital debility,' and 'lack of care' no longer appear among the leading causes of death, except as this indicates the progress of reporting practice in the direction of more accurate diagnosis and statement of the factors causing death. Accuracy in reporting diseases on death certificates thirty years ago was at a low ebb.

"There are nine new items in the list for the years 1925-1929. They are diabetes, now ninth in rank; automobile accidents, tenth; angina pectoris, eleventh; accidental falls, thirteenth; appendicitis, fourteenth; suicide, fifteenth; congenital malformations, sixteenth; diseases of pregnancy and childbirth, seventeenth; and hernia and intestinal obstruction, eighteenth.

"Of the diseases which were major causes of death thirty years ago, tuberculosis, heart disease, cancer, diphtheria, diarrhoea and enteritis, and premature birth are the most noteworthy examples of change in rank.

"In the first five-year period of the century, tuberculosis led

all other diseases by a large margin, with a death rate of 184.7 per 100,000. In the quinquennium 1925 to 1929, this disease fell to sixth in rank with a death rate of only 77.2 per 100,000—not greatly in excess of one-third of the earlier figure. Organic heart disease, which was third in order at the beginning of the century, is now a mortality almost double that of the leading cause of death, with thirty years ago. In only one respect have modern sanitation and medical science been able to effect any improvement in the mortality from cardiac diseases. There has been a considerable drop in the death rate among children and in adults up to age 45; but in the older ages we have lost ground heavily. One reservation must be made; namely, that the general aging of the population, which has taken place, is in part responsible for the rise in the crude death rate for heart disease.

"In 1900-1904, cancer was seventh on the list; now it is second, and the death rate has increased 69 per cent. Cancer, often so terrible in its manifestations, is the disease which has shown the most extreme change for the worse during the present century.

"At the beginning of the century, diphtheria ranked twelfth; in 1925-1929 it stood last among the twenty leading causes. If the figures were extended to include one or two later years, diphtheria would not appear on the list. What has happened with respect to this disease is an object lesson of what sanitary science can accomplish when intelligently applied.

"Infantile diarrhoea has dropped from fifth rank in 1900-1904, to twelfth in 1925-1929, and there has been a drop in the actual death rate from 91.4 per 100,000 to 18.0. Progress in the control of infantile diarrhoea has been made through the increased supervision of food and water supplies, more intelligent care and feeding of standards of community sanitation.

"Although there have not been large changes in the death rate from premature birth and influenza, their relative ranks rose considerably in 1925-1929 as compared with 1900-1904. These changes in rank are due to the fact that mortality rates corresponding to the figures of thirty years ago now entail much higher positions in the list.

"For certain of the causes of death which appear only in the 1925-1929 list, the death rate has increased enormously since 1900. This for diabetes has doubled; that for angina pectoris has tripled, and for appendicitis there has been a rise of approximately 50 per cent. Automobile fatalities were so infrequent early in the century that no enumeration was made of them until 1906; now they stand tenth in importance among all the causes of death."

Troops Reinforce Disturbed Area in Moslem-Hindu Row

BOMBAY, May 17.—(A.P.)—Troop reinforcements were moved yesterday into disturbed areas of Bombay where a casualty list of 24 dead and 400 injured has been piled up during two days of rioting by Hindus and Moslems. Fifty of the injured were in serious condition.

In six different parts of Bombay yesterday the police fired into mobs.

Late last night there were no signs that the disorders would abate. The rioters had started stoning temples and mosques.

Kelly issued an order prohibiting anyone except properly authorized persons from carrying swords, knives, lathis (staves) or stones.

The riots had their origin in an attack by Moslems on two Hindu boys. A detachment of Royal Irish Fusiliers was rushed to the scene of bloodiest clash.

Moslems stoned tramcars carrying Hindu passengers and some cloth shops were looted. Three Mohammedan children were reported killed.

Maulana Shaukat Ali, one of the Moslem delegates to the round-table conference in London, toured the affected districts, doing his utmost to pacify the mobs.

Long-standing antipathies of the Moslems and Hindus constituted one of the principal factors in the failure of the round-table conference.

WALKED 18 MILES TO DINNER
GREENFIELD, Mass. — Henry Hayden, 80, recently walked here from his home in Northfield, 18 miles away, for his usual birthday dinner at the Mansion House in memory of his father and mother, who were cooks at the hotel 111 years ago. After dinner and a short rest, he walked home.

In Florida, due to the abundant supply of fruits, the greater part

Group Bent Upon Visiting Mine Area Gives Up Attempt

KNOXVILLE, Tenn., May 17.—(A.P.)—Eastern members of the American Civil Liberties Union, headed by the colorful Arthur Garfield Hays, were en route home yesterday after a futile attempt to enter the Southeastern Kentucky coal fields, scenes of recent strikes and shootings.

Barred from entering Bell county, Ky., when told by officials that bloodshed might follow their visit, the group, which included Hays and Dudley Field Malone, returned to London, Ky. Advised there they must leave in four hours, Hays and six of the party came to Knoxville by train.

All expressed the opinion their trip had proved "that civil liberties do not exist in the Southeastern Kentucky coal region."

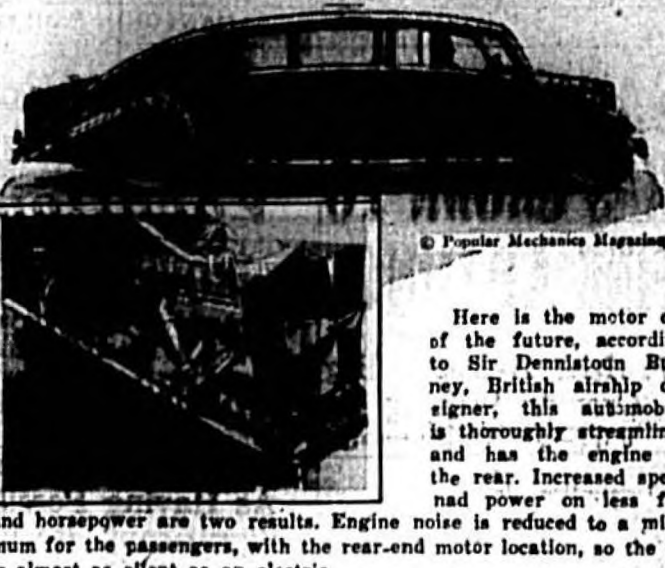

Before leaving Kentucky, Hays filed a \$100,000 personal damage suit against nine officers and citizens who he claimed blocked his entry into Bell county. He said it would test whether a community can prevent citizens from enforcing. "And if we can win that lawsuit," he said yesterday, "we will take what we get to promote civil liberties in Harlan and Bell counties."

Members of the party coming to Knoxville addressed a group of 100 men and women after their arrival telling of their experiences in Kentucky. They expressed no bitterness toward Kentuckians for their treatment.

On the plea of Hays, a Knoxville branch of the American Civil Liberties Union was organized.

Hays in his speech said the group has proved one thing clearly, "that it is not a communistic issue in Kentucky."

MOTOR CAR OF FUTURE

Here is the motor car of the future, according to Sir Dennistoun Burney, British aircraft designer, this automobile is thoroughly streamlined and has the engine at the rear. Increased speed had power on less fuel and horsepower are two results. Engine noise is reduced to a minimum for the passengers, with the rear-end motor location, so the car is almost as silent as an electric.

ROOSEVELT TELLS OF ECONOMIES HE PLACED IN STATE

Avers Curtailments Will Result In Ten Millions Of Saving

WARM SPRINGS, Ga., May 17.—Economies he began erecting late last summer in New York State government will result in a saving of \$10,000,000 for the fiscal year ending June 30, Governor Franklin D. Roosevelt announced here recently in the presence of Mark Graves, Director of the Budget, who arrived recently with a detailed report on the savings.

Mr. Graves' figures showed that the curtailment already effected will reduce the expenditures of the state to \$2,650,000 beneath actual appropriations by

June 30. The Governor said that Mr. Graves would go back to Albany soon with instructions to certain department heads to save \$1,150,000 more.

The entire saving, Mr. Roosevelt said, has been made within the limits of the flexible operating expenses of the state, which total less than \$100,000,000, and therefore will amount to more than 10 per cent of that sum. Excluded from this category are state aid to schools, salaries fixed by law and all public works. The entire saving, he pointed out, further, has been made without reducing a single salary. Instead, vacancies have not been filled and operating and maintenance expenses have been curbed.

The Governor's announcement is regarded by members of his party here as a "feat" on the special legislative committee under Republican control which is investigating that state government with the avowed purpose of effecting economies. Mr. Graves is quoted as saying that the additional sav-

ings ordered by Mr. Roosevelt between now and the end of the year could be accomplished substantially by stringent prohibition of the stocking up of supplies normally provided by departments having expended funds in the last months of the fiscal year. At the end of June, all unexpended appropriations lapse; since thereafter departments will be buying out of the appropriations for 1932-33, the amount saved this year will become a surplus in the State Treasury to offset losses of tax receipts next year.

"On September 15," said the Governor, "I held a cabinet meeting, and in view of the decrease in tax receipts, I asked the heads of all the departments for estimates of the savings that could be made under existing appropriations. As a result of this they estimated that they could save a total of \$6,370,245 out of appropriations actually made."

"In April I asked the Director of the Budget to take up with each department head the desirability and possibility of still further reductions in actual expenditures with the net result that the revised figures, brought here by Mr. Graves, show total savings of \$8,850,652 out of actual appropriation, or an increase over the previous figures of \$2,470,687."

"This is a remarkable showing because in the past lapses back into the treasury—money appropriated but not spent—seldom have been as high as \$2,000,000."

"On this visit Mr. Graves and I are going over the figures and I am asking Mr. Graves on his return to Albany to consult again with every department head with the purpose of saving another \$1,150,000 between now and the end of the current fiscal year on June 30. In other words, I am fixing the boys' goal at \$10,000,000 as the savings that will be made in actually running the government during the fiscal year. And I might point out that this will mean \$10,000,000 in savings out of total appropriations for operating these departments of less than \$100,000,000 in the budget, which represents, pretty much a 10 percent slash."

Henry Markertman, Jr., Conservation Commissioner, arrived here recently. He has just completed a tour of the West, in which he has conferred with agricultural leaders and editors of farm publications. It is believed that he has been collecting material for Mr. Roosevelt's presidential campaign.

New Cotton Uses Being Suggested By Textile School

RALEIGH, N. C.—New uses for cotton are being suggested and demonstrated by the Textile School of the North Carolina State College of Agriculture and Engineering in cooperation with the Bureau of Agricultural Economics of the United States Department of Agriculture and other agencies.

"As a result of these efforts," said Mr. T. H. Hart of the college, "we are to be using longer sheets; gloves are being made of cotton; and onions in visible cotton."

The textile school of the North Carolina State College does much fancy weaving. These fabrics consist, for the most part, of cotton dyed in stripes, checks and fancy patterns, fancy rayon and cotton combinations, also a line of heavier fabrics for suits, coats and sport clothes.

Much attention is being paid to the heavier fabrics. They are made from coarse cotton yarns and contain about 10 ends to the inch. Such fabrics, it is found, can be manufactured cheaply, as a high grade of cotton is not required.

Alabama 4-H Clubs Reported Having Large Enrollment

AUBURN, Ala.—In his annual report on the work of 4-H Club boys of Alabama for 1931, Mr. Thomas A. Sims, state club leader, said that the 10,244 boys who were enrolled in this work produced products worth more than \$200,000 at market prices.

The report revealed that the boys were "master farmers" on a small scale. In cotton, the average yield of seed cotton an acre was 1163.5 pounds. This was equivalent to a lint yield of 22.5 percent of 22.5 pounds an acre over the 1930 average and was more than double the average yield for the state.

Dairy calf club work has been conducted in the state several years and in 1931 Mr. Sims found that 1031 Jersey calves were owned by Alabama 4-H Club boys. Beef calf clubs owned 129 calves and pig clubs owned 3439 pigs, while 41,821 chickens were owned by club members. In all this work, Mr. Sims explained, the main objective is to teach important facts which the boys can use in farming and also in other lines of work in which they may engage.

South Carolina's State Gardening Contest To Remain

CLEMSON COLLEGE, S. C.—Mr. E. A. Schilleter, extension horticulturist, has announced that the state garden contest, which proved such a success last year, will be continued during 1932. Mr. Schilleter has had charge of the work since its inception four years ago.

Funds for arranging the school sale of cash prizes have been received from various sources throughout South Carolina. It is hoped to stimulate year-round gardening through promotion of the competitions, Mr. Schilleter said.

Five classes of gardens are provided for the rules of this year's contest: 1. Home gardeners selling not more than \$100 worth of products; 2. Small market gardeners selling not in excess of \$250 worth; 3. Market gardeners, selling more than \$250 worth; 4. Ten-acre farmers, and 5. Negro farmers. Plots of any size are eligible to participate in the contests, but first consideration will be given those showing the most intelligent use of effort, Mr. Schilleter explained.

"For any nutrition program, particularly an emergency program for children, at least one egg a day is a safeguard; eggs should certainly supplement any shortage of a quart of milk a day." — Dr. George Sherman, Columbia University.

MASS. SHOWN LARGEST POLL LIQUOR ISSUE

Of Ballots Is
Within 1 Percent
Of Voting Strength

Four states returned a poll of ballots within one per cent of the official 1928 voting strength of the states in the referendum. The Literary Digest National-Wide Poll according to an analysis of the returns published in Friday's issue of the magazine, shows that the four states which returned the percentage of the popular vote in the Hoover election and the percentage of the total population in the 1928 election within one per cent of the official figures are: Ohio, with 8.43 per cent of the state's population, returned 8.96 per cent of the total population; New York, with 12.11 per cent of the state's population, returned 10.79 per cent of the total population; Pennsylvania, with an 8.84 per cent of the state's population, returned 8.28 per cent of the total population; and Ohio, with 8.43 per cent of the state's population, returned 8.96 per cent of the total population.

Improvement Of Cattle Breeds Is Being Sought

(Continued from Page One)

The Literary Digest presents an analysis as a reflection of the progress of the industry. The analysis shows that the progress of the industry is being sought in the improvement of the breed of the cattle. The improvement of the breed of the cattle is being sought in the improvement of the breed of the cattle. The improvement of the breed of the cattle is being sought in the improvement of the breed of the cattle.

Strawberries Provide War Whitewash Dish Furnishing Needed Vitamin C

By HELEN MENDEL

Of course you have had an occasional taste of the strawberries which came from Florida during the winter. They are coming into the market now in quantities from the southern production. If you are going to eat your share of the 350,000,000 quarts that will be commended in this country this year, perhaps you had better get busy. The forecast is for a good crop of quality berries, and prices that will make it necessary to look on quality as a Sunday dish or something special for company. They will have an "every day" price on them.

Millions Of Bibles Issued By Society

NEW YORK, May 11.—A total of 2,745,266 volumes of the Scribner, issued by the American Bible Society during 1931, according to reports from the 116th annual meeting of the society recently. This circulation figure for 1931 being the total for the 111 years of the society's service to the world.
