The June rise in the consumer price index, announced today, was led by higher prices for new and used cars, medical care, mortgage interest costs, household durables and fresh fruits.

Food prices rose a seasonally adjusted three tenths of one per cent, a rate slightly more than usual for June but a much more moderate pace than in any other month this when food prices fell four tenths of one per cent.

The June increase in consumer prices works out to an annual rate of 12 per cent. For the three months ending in June the pace of inflation soared at an adjusted annual rate of 10.9 per cent, according to the government figures.

Consumer prices last month rose to a level 11.1 per cent higher than a year ago, with the government's index at 147.1. This meant it cost \$147.10 to purchase a variety of consumer goods and services that cost \$100 in 1967.
