1: MORTALITY RATE 2. INTEREST RATE S. EXPENSE RATE

1: MORTALITY RATE 2. INTEREST RATE 3. EXPENSE RATE

Over a period of years there will probably be very little difference
in the mortality and the interest pales known the hirter companied.
They are all imperior the mand, chass of people and have the simil fold
available for making investments.

St. there will be very little-difference in the actual cost to THE
COMPANIES over a period of years.

HUT, there will be a great difference his far as TOU are consequent
after the cost of the company's SERVICES in addict to the setual cost.

NOW, lan't it a foregone conclusion that insurance in a contently
with an expense rate of over \$4 per thousand will cost you more than
in a company with an expense rate of \$2.85 per thousand.

AND YET, it can be made to never into the opposite by described
cost figures, based on precitions paid, dividents returned and cash
value available at the end of a certain period.

THE ANSWER lies in the fact that not cost figures only above the
cost if you live and take the cash value at the end of the period limiterated, but not cost figures do not show how much hisurance per dollar
of premium your family will get, if you die,

THE POLICY that gives you mere insurance per dollar, at grantum
if you die shows a higher not cost per theirsand if you live and take
the cash value. And it is very easily explained, because the later does
the cash value after the actual cost of insurance projective at the
tremely low ambital premiums, but on an equal premium basis will above
a lower net, cost.

YOU, tos, will be convinced that PRUDENTIAL PULICIES PROVE

YOU, too, will be convinced that PRUDENTIAL POLICIES PROVE.
