ROUMILLAT & ANDERSON

Coral Gables Comes to Flagler Street and The Trolley Road Comes to Coral Gables

The opening up of the Flagler Street Section is one of the most advanced steps which Coral Gables in its remarkable development has taken. The building of a fine coral rock entrance near Douglas Road and Flagler Street -the building of the 100 foot thoroughfare, Ponce Del.con Boulevard to Flagler Street -and finally the extension of the Miami trolley service out Flagler Street to the new entrance and down Ponce DeLeon Boulevard to Coral Way - all these are of far-reaching importance now only in the development of Coral Gables, but in the advance and progress of western Miami.

The Flagle Street section contains about 500 plots. It adjoins the fine Douglas section of Coral Gables on the north. Its principal street will be Ponse Deleon Boulevard which is a continuation of the main boulevard now extending from S. W. Eighth Street through the Douglas and business sections to Coral Way. This fine thoroughfare will link up Flagler Street, Miami's main highway, with many of the finest sections and principal features of Coral Gables.

Now the trolley road will run south on Ponce DeLeon Boulevard to the new administration building: now being erected on Coral Way. From this point a ten minute bus service will be extended to all residential sections of Coral Gables, thus affording all residents the maximum convenience and comfort of up-to-date transportation without the noise and crowding of streets which trolley service entails.

It is apparent therefore that Coral Gables' coming to Flagler Street heralds a tremendous stride forward for all western Miami, and a higher degree of prosperity than even this fine section has ever known before. It means increased value and larger profits for investments. It means that those who get in on the ground floor will gain a splendid advantage. It means most of all, that those who buy now in the Flagler Street Section of Coral Gables will get the full advantage of pre-development prices and the benefit of the increased values which will follow.

Ideal Grass Fertilizer FOR LAWNS AND GREENS

During the heavy rains of the summer season much of the fertilizer, particularly the a silable ammonia, is washed or leached out of the soil. The grass takes on a yellowish dormant appearance and has an unthrifty look." A good application of IDEAL GRASS FERTILIZER analyzing 5% Ammoina, 8% Available Phosphoric Acid, and 2% Potash will bring life and vigor back into the plants and give a green velvety surface that is the admiration of all. Broadcast at rate of about 2 pounds to each 100 square feet and wash into the soil with water. Repeat the application after a six to eight weeks' interval. For flowers and shrubs we recommend an application of our W. & Y.'S IDEAL GROWER
