

Florida Citrus Growers Will Enjoy Fruit

WASHINGTON, Jan. 20.—(Special)—Southern sailors and passengers at the various camps and messes over the country will enjoy more of Florida's citrus fruit and vegetables than in the past, in the opinion of Senator Pepper, who said today that the Army and Navy will shortly announce specifications for camp messes and supply officers which would favor California's particular peak of oranges.

After several weeks of negotiations between representatives of the Agricultural Experiment Station, the Quartermaster Corps of the Army and the Supply Division of the Navy, Senator Pepper telegraphed C. C. Commissioner of the Florida Citrus Exchange as follows:

"It is the purpose of the Quartermaster Corps to set up 30 terminal points for the purchase of citrus, vegetables, etc., for the messes in the various camps and posts. It is presently being placed in the hands of the Quartermaster who will be the coordinator of purchases of fresh fruits and vegetables of the Department. He is presently in the city. I have talked with Colonel Logan who works with the Department and he advises that at an early date the Quartermaster will receive new specifications for the purchase of oranges that are fair alike to Florida and California. Purchases will be made of uncracked wire-bound boxes packed varying sizes 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88, 90, 92, 94, 96, 98, 100. The purpose is to buy the largest possible quantity of oranges for the messes. Purchases will be made of the quartermaster directly of the grower. While the purchase of fresh fruit will be made by the Quartermaster, the estimate

British Navy Is Quotation Maker

General Sir Archibald Wavell, commander-in-chief of British forces which have been pushing the Italian frontiers down Libya, has a very wide range as well as with his beloved infantry. His rise to the rank of a general in the British is being fast print some quotations in this 27-year career of 10 years of military service.

The Wavell description of an ideal infantryman: "A mixture of peacher, cat burglar and gumbler." "Of a general's appearance: "An imposing presence can be a most useful asset, but good generals, like good chessmen, run in all shapes." "Of aerial warfare: "No one should hold the rank of higher commander in the army without having had at least six months' really close association with the RAF."

Of military convention: "There is too much stress on spit and polish, or details of the regulations and of dress, at the expense of mental liveliness and independence of thought." He is a military man by inheritance. His books on the Palestine campaigns of the World War are the standard work on the operations of the British Army in the Middle East. He is the author of the book "The British Army in the Middle East" which has been required reading for many years.

Wavell was one of Allenby's chief staff during the final stages of operations against the Turks. He considered Allenby the greatest general since Wellington. The attack on Sidon, involving secret movements on the open desert, hiding of troops and supplies by night, a joint attack on the flank followed the strategy employed by Allenby when he rolled up the Turkish army in 1918.

He is a military man by inheritance. His grandfather was a soldier of fortune; his father was a major general. Wavell's army career began with the famous Scottish Black Watch regiment in the Boer war. He served in the northwest frontier in India and in France, Belgium and Russia as well as in Palestine during the World War. He was on the staff of the British army in the Middle East.

He has been commander of British's middle east forces since the outbreak of the present war. He has been in the Middle East with the French in the defense of Suez, the naval base at Alexandria, and the oil outlet at Haifa. He has had to be scrapped since the fall of France. Wavell is a general in the British Army. He is a military man by inheritance. His grandfather was a soldier of fortune; his father was a major general.

At Florida Waterways Meet

NEW SMYRNA BEACH, Jan. 20.—(Special to The Sanford Herald)—Hon. Frank Knox, secretary of the navy, has been invited to Florida to address the Florida Waterway Congress at New Smyrna Beach Saturday, Feb. 8, on the subject of national defense.

Walter F. Conshman, Jr., of Jacksonville, chairman of the Florida Waterway Congress, in inviting the secretary of the navy, reminded him of the importance of Florida waterways to national defense as well as the importance of the Florida Waterway Congress, which is holding its sixth annual conference at New Smyrna Beach and will bring together representatives of every waterway interest and project in Florida.

Chairman Conshman called the attention of Secretary Knox to the objectives of this congress as set forth in the statement: "To connect river with river and lake with lake, and thus develop a waterway paradise unrivaled in the world, which will be a veritable mecca for yachts and pleasure craft; will increase the wealth and development of Florida; and forever assure our people of low waterway transport for their products."

"To stimulate and encourage a greater use and enjoyment of Florida's waters by Florida's people and by visitors for sport and recreation." Vice Chairman W. P. Franklin of Ft. Myers and H. C. Brown of Clermont urged the people of the state who are concerned with the development of Florida's waterways to make their plans to attend this meeting at New Smyrna Beach, which opens at 10:30 o'clock Saturday morning, Feb. 8, and closes at 2:30 P. M. following the luncheon, in time to witness the fleet parade and the final heat of sailing races which will begin that morning.

The first fishermen's memorial in America will be dedicated at New Smyrna Beach at 2:00 P. M. the day preceding the annual Waterway Congress, and will be followed by the annual meeting of the board of directors of the Waterway Congress. Officers, directors and speakers for the conference, including high officials of the War Department, will be guests at a

The Highway Patrol

An interesting report on the work of the Florida Highway Patrol comes to us by way of the Florida News Service from the State Department of Public Safety. It shows that during the month of December, there were 129 auto drivers' licenses revoked and that of these 129 a total of 115 were revoked from drunken driving.

The figures indicate the serious problem which this drunken driving still remains. Undoubtedly for every man arrested for driving drunk a good many got away without getting caught and there were probably some arrested who managed to retain their drivers' licenses. But everyone who gets behind a steering wheel after drinking liquor is a menace to others on the highways.

During the year of 1930 the 60 State patrolmen authorized by law arrested 625 persons for drunken driving, 1,421 for not having drivers' licenses, 629 for operating overweight trucks, 261 for reckless driving, 21 for passing school buses, 23 for having improper lights, 221 for having improper automobile tags, 67 for parking on the highways, and 494 for other offenses. There were 2,216 convictions obtained, 284 cases discharged and the remainder are still pending.

The State patrolmen put in 124,620 hours of duty, and traveled 2,112,267 miles on motorcycles, patrol cars and other vehicles. During the year they stopped 22,622 passenger and commercial vehicles, reported 12,825 light corrections and 2,123 license plate corrections, weighed and measured 2,245 commercial vehicles, and reported 22,622 other driving convictions. They inspected 285 school buses and rendered assistance in 11,655 cases. 1,699 accidents were investigated in which 127 persons were killed, 1,332 persons injured, in which first aid was given to 421 victims.

Since the Drivers' License Act became effective in October, 1928, a total of 1,024 drivers' licenses have been revoked, and 498 have been suspended. Practically all of these revocations and suspensions were made during the year of 1930, as the Highway Patrol did not become active until Dec. 11, 1930.

America Can

In years past America has produced more automobiles, more radios, more ships, shoes, and shirts than all the other nations of the world put together. Now that the emphasis is on armaments, America should be able to far outbuild Germany, Italy and Japan in tanks, airplanes, and other implements of war.

America can, Walter Lippman says, if management, labor and industry work together. The well known columnist of the New York Herald Tribune, who is not given to false optimism, paints a bright picture for the coming year if the American people will forget their differences and pull for the common good.

"If this mighty continent goes to work as it can go to work when it goes all out," he writes, "the year 1931 will see the end of doubt, division, and fear, and the gathering together of an America which is true to its past and equal to anything that the future may bring. Then we shall not only sleep well at night; in the day, having the consciousness of working hard and to a single purpose, we shall have done with anxiety."

For this we depend upon the government for the plan, the organization, the leadership. But for the results we depend upon the directors, the managers, the technicians, and the employees of American industry. The defense of America is in their hands. They are not the corrupted employees of a totalitarian state, and it is for them to show that a free industry can in fact keep the world free.

"If they succeed, as I believe they will, their success will insure the future of free industry by the only means through which its future can now be assured—by an overwhelming proof of its superiority in the struggle for existence. If now the free peoples are defeated, there will be no future anywhere for free industry."

"That American industry will not fail in the test... The world will see this year the proof that this young continent possesses the energy which, throttled down in these ten years of depression and confusion, will pour forth to astound the world."

Americans with faith in their country believe these words with all their hearts. They know that the year ahead is one in which this nation will again prove its industrial and its democratic power, and they face their part in that test with real confidence.

Low Government Cost In County Cited By League

(Continued From Page One) litical graft, or other reasons are unnecessarily increasing the cost of our democratic government, the statement said. 'The cost of federal, State, and local government has increased enormously in the past 10 years. The cost has already reached the point that the tax burden is a severe strain on the individual taxpayers, therefore, on our entire economic system. We are now faced with the necessity of spending additional billions of dollars for national defense. To pay the defense bill without wrecking our entire economic structure it is essential that the cost of ordinary government functions be reduced to the absolute minimum, otherwise, history may show that the worst enemies in democracy were not the aggressor dictators of foreign lands but those of our own elected officials who through incompetence, waste, and extravagance rendered the world's greatest democracy incapable to defend itself.

Kennedy Declares Some In Britain Want U. S. In War

(Continued From Page One) should go all out to rearm now. He made clear, however, that he favored full and "short of war" — to the British. Administration leaders have indicated they would not be opposed to placing a time limitation on the presidential powers. Roosevelt has said he has no personal ambition for more authority but that someone must necessarily have the power to act. Some of the powers now vested in Roosevelt have obtained through new legislation; others have been revived from old statutes and still others have been invoked by the President through implied constitutional authority. Among others, Roosevelt has power, for the purposes of defense, to: 1. Seize, under Congressional authority, all private ships for defense. 2. Commandeer all private ships for defense. 3. Inmobilize all foreign credits in this country. 4. Run American ships from waters designated as combat zones under the neutrality act. 5. Impose indirect embargoes on exports of materials essential to the production of defense. 6. Compel factories whose owners refuse to cooperate in the defense effort. 7. Requisition essential materials sold to foreign countries. 8. Break contracts for shipment of defense materials on land.

AND THAT GOES FOR BATES, TOO!

AND THAT GOES FOR BATES, TOO! BY FRANK STRIKER

**War-Torn Britain
Performs Three-Color Television**

LONDON, Jan. 21.—(Special)—The first color television broadcast in the world was made by the British Broadcasting Corporation (BBC) on Jan. 1, 1936. The program, which was a performance by the opera singer, Joan Sutherland, was transmitted from the BBC's studios in London to a receiving station in Glasgow, 400 miles away. The broadcast was a landmark event in the history of television, as it was the first time that color images were transmitted over a distance. The program was received in Glasgow by a specially designed receiver, which was able to pick up the color signals and reproduce them on a screen. The broadcast was a success, and it demonstrated the potential of color television. Since that time, color television has become a major part of the entertainment industry, and it continues to evolve and improve.

**Lightray Gun Is
Used By Canadian
Training Troops**

CAMP BORDEN, Ontario, Jan. 21.—(Special)—A harmless ray gun which, military officials said, "shoots" with the accuracy and range of a medium machine gun, is being used by the Canadian armoured corps in training here. By means of a light bulb, magnifying glass and lens, the ray gun is "fired" in exactly the same way as an ordinary machine gun. It is equipped with a telescopic sight similar to that used on machine guns. When used in mock battles the gun will cause "casualties" by catching men in the flickering light. Those "shot" by the gun will have no doubt that they are hit, officials said, because even at ranges up to 1,500 yards in bright sunlight, the ray is nearly blinding in intensity at its center. A few feet on either side, within what would be the "beaten zone" of a machine gun, a reddish-yellow light is plainly visible. The gun was conceived by Col.

John of the principles employed. All color, he said, are produced by mixing the primary colors, blue, green, and red, in varying proportions. For example, purple is a mixture of blue and red, yellow is red plus green, and so with every visible color. This principle is made use of in color printing, three pictures being made, one showing the red component, the other the green component, and the third showing the blue component. These pictures are superimposed and the final picture shows a complete reproduction. The same principle is used in color television, blue-green and red pictures being superimposed to get a complete picture in natural color. This is achieved by transmitting blue green and red pictures in rapid succession so that the eye blends them to give a picture in the original color, plus employing what is known as "persistence of vision." The human eye is only able to separate speeds up to about one seventh of a second. The latest process, in some aspects paralleling color-television experiments in the United States, consists of a cathode ray tube scanned with 600 lines. The moving spot is projected through a disc fitted with blue-green and red color filters so that the scene being transmitted is scanned by blue-green and red light spots in succession. The light thrown back from a scene strikes photoelectric cells. The signal from these cells is transmitted by wire or wireless to the receiving station where pictures corresponding to blue-green and red are produced in sequence on the receiving tube. These pictures are projected upon a screen by means of a lens, and blend to form the original pictures in color.

"It's the one unforgivable social error"

It is a common mistake to think of color television as a new invention. In fact, it has been around for a long time. The first color television broadcast was made in 1928, and since then, there have been many improvements. Today, color television is a major part of the entertainment industry, and it continues to evolve and improve. The technology behind color television is based on the principle of persistence of vision. This means that the human eye is only able to separate speeds up to about one seventh of a second. This is why color television works so well. The latest process, in some aspects paralleling color-television experiments in the United States, consists of a cathode ray tube scanned with 600 lines. The moving spot is projected through a disc fitted with blue-green and red color filters so that the scene being transmitted is scanned by blue-green and red light spots in succession. THE OLD HOME TOWN

**Stewart Says—
Peace Organizations
Having Troubles as
Another Group Loses**

By CHARLES F. STEWART
Central Press Columnist

OUR VARIOUS peace organizations seem to be having their internal troubles. Maybe it is because the average extreme pacifist notoriously is so extremely hell-bent on peace that he is not willing to fight for it. We have two outstanding examples of this already, and another one is in the making. As the G. E. Armstrong two or three years ago, he was one of the most prominent peace advocates in the United States. He was the author of the "No Foreign War Committee" and was a member of the "Keep America Out of War by Aiding Britain" committee. He was also a member of the "No Foreign War Committee" and was a member of the "Keep America Out of War by Aiding Britain" committee. He was also a member of the "No Foreign War Committee" and was a member of the "Keep America Out of War by Aiding Britain" committee.

**What the No Foreign War Committee
Was Trying to Negotiate**

The No Foreign War Committee was trying to negotiate a peace treaty with the United States. The committee was led by G. E. Armstrong, a prominent peace advocate. They had waived trial by jury and pleaded not guilty. The judge was Mullins, and the defendants were the members of the No Foreign War Committee.

**Income
Taxes This Year**

WASHINGTON, Jan. 21.—(Special)—The Treasury has completed distribution of blanks to 15,000,000 individuals and 1,500,000 corporations from whom it expects income tax returns this year. Technically, returns were due Jan. 1, but officials said it was customary for many persons to wait almost until midnight March 15, the deadline, before filing them. The anticipated number of individual returns was double the 1940 figure, due to the Defense Revenue Act of last summer. This act cut exemptions for single persons from \$1,000 to \$500 and for family heads from \$2,500 to \$2,000, besides adding a 10 percent "surcharge" to the regular rates. That meant that the Treasury wanted a return from every unmarried person who earned at least as much as \$1,500 a year and every family head who earned \$3,475 a year last year. Figuring that the millions of new taxpayers would need at least as much help as their "old customers" in filing in the tax blanks, officials said they were starting early to organize informational facilities at the 53 collector's offices throughout the country. The number of anticipated corporation returns was only about 500,000 more than last year, but many corporations will have an extra return to fill out in compliance with newest of the defense taxes—the excess profits levy. The United States army is to be increased to 1,400,000 in 1942.

**Eighteen Cases
Appear At City
Court Session**

Eighteen cases were listed on the docket for the regular session of Municipal Court Monday afternoon at the Police Station. Cases against white parasha included one against Stephen L. Paul for drunkenness. He was found guilty and given a suspended sentence of 30 days. G. L. Powell, accused of reckless driving, was convicted and given a suspended fine of \$10 or 30 days. J. W. Altman, accused of speeding, was found guilty and fined \$5 or 15 days. C. W. Wallace, charged with being drunk and disorderly, was judged guilty and given a suspended sentence of 30 days. J. Padgett, accused of drunkenness, was found guilty and given a suspended sentence of 30 days. Courtney U. Soderblom, charged with speeding, was convicted and given a suspended fine of \$5 or 15 days. Harry Costello Jones, accused of petit larceny, was transferred to Constable Brown of Orlando. Willie Lee Mike, accused of loitering, was judged guilty and given a suspended sentence of 60 days. Marie Montgomery, accused of disorderly conduct, estimated a \$10 bond. Bescher Thomas, charged with disorderly conduct, estimated a \$15 bond. John Twigg, charged with being drunk and disorderly, estimated a \$15 bond. Eddie Ross, accused of drunkenness, was judged guilty and fined \$10 or 30 days. Johnis Miekens, accused of

**GRIFFIN ALLOWED
IS FAR
ON EVERY SCORE**

Gives a "new shoe" finish to leather or fabric... won't rub off!

GRIFFIN ALLOWED

We all enjoy having our friends "drop in". But on these busy occasions are you sure you can't find time to get a little extra help? Griffin Allowed is the answer. It gives a "new shoe" finish to leather or fabric... won't rub off!

**Sea Island Seeds
To Get Treatment**

LEESBURG, Jan. 21.—(Special)—Florida producers of sea island cotton seed, which are usually with the United States and the Department of Agriculture, are to treat with special care that all certified sea island cotton seed be treated with a special treatment to protect it from the boll weevil. The treatment is a special one, and it is being done by the United States and the Department of Agriculture. The treatment is a special one, and it is being done by the United States and the Department of Agriculture.
