

...THE HOPE OF OUR COMMUNITY, OUR NATION!

The Church...

Building with power

Technology is abroad in the land. Everywhere big yellow and green machines pound and churn the earth. Highways unroll, apartment complexes rise and amusement parks expand.

Our children watch. They know power when they see it! Some of our children, though, don't know about another power for building. They have not been taught to see it. It is the power of God and it also shakes and moves us. It is necessary for all men—a gigantic source of energy and strength.

Take your children to church on Sunday. They will be tomorrow's builders.

Sunday Edition - 20 Cents The Sanford Herald Electrical Board Probe Draws Askew's Attention

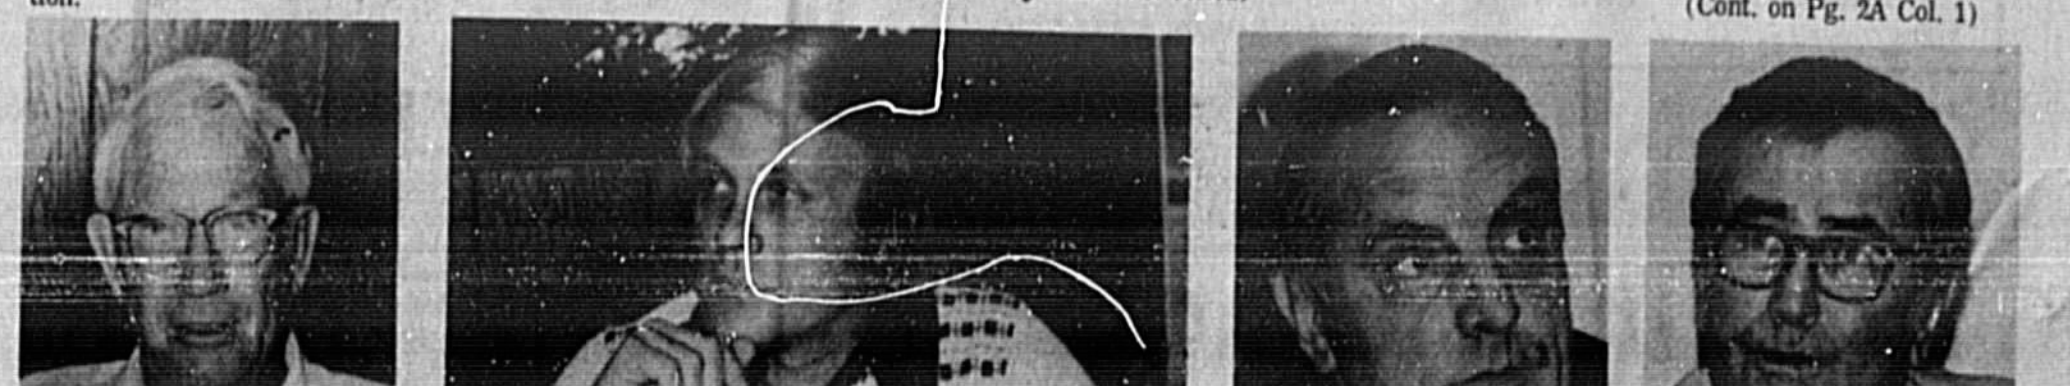

By CHRIS NELSON and MARK WEINZITZ Herald Staff Writer

With the governor's office watching, the state's attorney's office Saturday cancelled as "premature" a scheduled meeting between the Seminole County Commission and its Electrical Board of Examiners in a futile attempt to put the wraps on the rapidly expanding state probe of conflict of interest charges against the examiners.

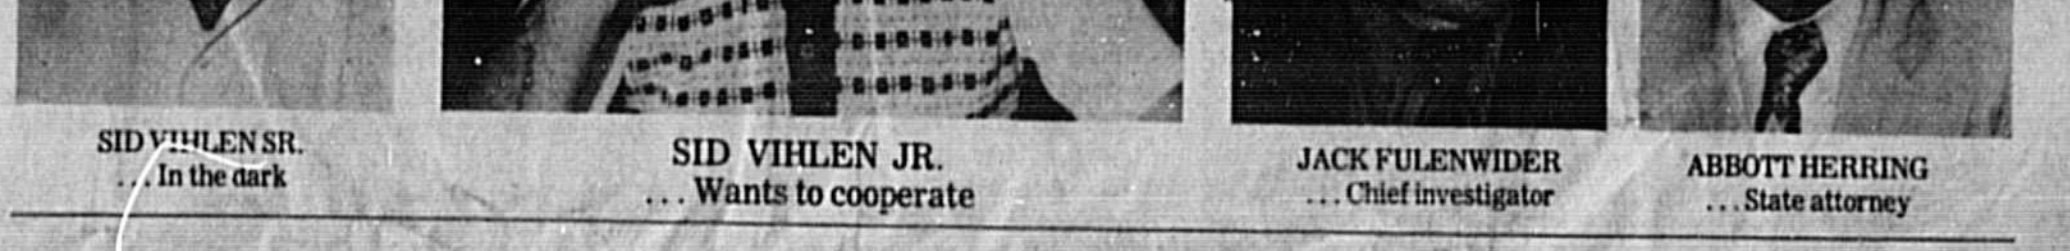

Around The Clock Bobby Riggs Promises To Jump Bridge

Agnew Reported In Plea Bid

WASHINGTON (AP) — The Washington Post quotes a congressional source as saying that Vice President Spiro T. Agnew "is engaged in plea bargaining — that, Agnew's resignation is part of the plea."

The newspaper reported in today's edition that it had been told by informed sources that Agnew's lawyers and Justice Department officials are discussing the possibility of his resigning and pleading guilty to a relatively minor offense.

Neither the White House, the vice president's office nor Deputy Atty. Gen. William Ruckelshaus would comment on the report.

Kissinger At Helm Of State

WASHINGTON (AP) — Henry A. Kissinger was sworn in today as secretary of state, launching a promised era of "new consensus" in the shaping of foreign policy.

Kissinger is the 66th man to hold the office but the first foreign-born, naturalized U.S. citizen in the post.

Gas Dealers Close Down In Phase 4

Motorists had to cope with gasoline station closings in northern California and areas of Oregon and Washington State this weekend as thousands of dealers demonstrated their anger with Phase 4 price controls.

Protest closings also threatened to start next week in Maryland and Washington, D.C.

However, a survey today of Sanford area dealers indicated no plans to close during the protests.

Tactics to deal with the federal price regulations were expected to be a prime topic when the National Congress of Petroleum Retailers, representing gasoline dealers associations across the country, meets Sunday in Chicago.

The gas station operators are irked because Phase 4 recent hikes in wholesale gasoline prices.

In California, nerves were thin and minor traffic jams developed when motorists shutdown on stations still open Friday as word of the weekend shutdown spread.

Representatives of more than 3,000 northern California service stations had voted Thursday night to close until Monday to protest as the price controls. In some areas north of San Francisco, as much as 90 per cent of the stations were reported closed.

In Gleneden Beach, Ore., a shutdown by many local gasoline dealers prompted the takeover of an abandoned service station by National Guardsmen to supply fuel for cars of field headquarters in the Western Governor's Conference being held there.

# Nancy's Newsnotes

day is a concert in which the Rushford Band and another band get together.

This year, the folks in Rushford were pleased to have the US Marine Band from Cherry Point, N.C. join their festivities. One of the outstanding musicians playing for Rushford that day, was our own Knowles Williams, who played the trombone.

As if their activities in Rushford were not enough, the Williams' manage to squeeze in a visit to their daughter and her husband, Mr. and Mrs. Ronald Schwind of Dayton, Ohio. Some trip, huh?

### By NANCY BOOTH Herald Correspondent

#### WINTER SPRINGS—Hi!

Seems as if I am not the only Winter Springer who recently went on a trip and has, as a highlight, an out of the ordinary experience. Mary and Knowles Williams of 304 David Street spent several weeks visiting friends and relatives in Arcade and Rushford, N.Y. Accompanying on their trip were their son and daughter-in-law, David and Ellen Williams of Tampa.

While in Rushford, which, by the way, is Knowles' hometown, they participated in the annual celebration called Old Home Week. This has been a yearly event since 1857.

It is a three-day celebration finishing up with the big day, Labor Day. On that day, there is a parade, carnival, horse pull, and in the evening, fireworks. The highlight of the

from another of the nice ladies from Haddock's, the sweet and "young" Mrs. Allen. She was telling me all about her vacation this summer. She spent the past three months visiting friends and relatives in New Jersey, N.H. and Long Island, N.Y.

It had been years since Bea was up in that section of the country and thought the scenery, particularly in New Hampshire was just beautiful. Bea also loved her stay in Long Island, as it was way out on the point, right near the ocean. She said the area was delightful. It was with mixed feelings, Bea returned to this area. She says she still misses her friends up there, but is also looking forward to getting involved in the many activities of Hacienda again. She is looking forward to seeing all her old friends and greeting all the residents who have moved to the Village since her absence.

Acting Winter Springs Fire Chief Irwin Hunter and his charming wife, Beckie celebrated a joint birthday on Sept. 17. There were a few surprises in store for the Hunters when I wrote this column. I will try and get the details and tell you about them next week. Happy Birthday, Irwin and Beckie!

We had some more visitors ourselves this past week. My aunt Sal, Mrs. Sarah Gardner from Arlington, Va., stopped by for a few days. She had a friend with her, a Carroll Coakley from Arlington.

We always enjoy my aunt's visit, as she is not only my favorite aunt, but a lovely person according to others. We found Mr. Coakley to be a charming and intelligent person who made a delightful home guest.

Coakley retired 10 years ago from the Maritime Commission in Washington, D. C., after 40 years. During World War II, he was the Chief Procurement Officer for the Maritime and had the tremendous responsibility of procuring all the varied materials and equipment needed for the construction of aircraft ships.

Quite a distinguished record of service to one's country.

Mr. Ruth Fuller of 101 Sherry Ave., who is the Winter Springs representative for the Seminole County Council on Aging, recently spent three months in Butler, Ind. Mrs. Fuller rented a home up there and spent the summer being with real estate and friends. Mrs. Fuller had been a teacher in that general area for many years.

Mrs. Ruth Fuller and his wife, Mr. and Mrs. Lynn Fuller and Mrs. Lynn Fuller's father, Mr. Jess Schuller of Butler and Fort Wayne, Ind., returned with Mrs. Fuller and spent a week visiting in our city.

While talking with Mrs. Fuller, she told me that we have another representative from Winter Springs on the Advisory Council for the Aged. She is Mrs. Helen Green, who was Winter Springs city clerk for several years.

Now that the summer is over, these two ladies are planning on going ahead full speed to acquire the senior citizens of Winter Springs of what benefits they are entitled to. I will keep you informed on the Council activities in future columns.

# Today's Society

## Is Drug-Oriented

By MARILYN GORDON  
Seminole Coordinator for Young Programs, Inc.

Few problems have aroused more concern than drug abuse. Our society is drug-oriented. Every little ache and pain, tension or anxiety sends Americans scurrying to the drugstore for relief.

Ten years ago, most parents thought such problems would never touch their lives. We thought, then, that by eliminating poverty and discrimination we could erase most of the drug problem.

Today, the spread of drug abuse has reached epidemic-like proportions. The problem is in the college, the high school, junior high and even into the elementary school.

Why do they try drugs? Traditionally youth is a time for experimentation, and to some the forbidden has a special allure.

One very important motivation is peer pressure to conform and to become one of the group. It is very difficult to resist constant urging from one's friends. This type of follower enjoys drugs for comradeship.

As he matures, he develops less need to conform to the group. On the other hand, the youngster who is taking drugs to compensate for serious personality problems will continue to use drugs to escape from adult responsibilities.

Many are curious about drugs, some hope to find "meaning in life."

Most young people who experiment with drugs will not become dependent on them. After their curiosity is satisfied, or after a disillusioning or frightening drug experience, they will stop.

What are some of the things that a parent could look out for? Loss of energy, and increasing passivity, or overactivity, difficulty in concentrating, unrealistic attitudes, shortness of temper, not caring about personal appearance and questionable friends.

What can a parent do? Keep the lines of communication open. Encourage an atmosphere in which the youngster feels free to confide. Avoid scare techniques.

Teenagers are demanding and are entitled to an honest and accurate answer. Avoid creating an atmosphere of distrust and suspicion. Avoid drug stereotypes. As a parent, be well informed about drugs. Everywhere you turn, there is information available.

Spread the word that it is not a crime to be an addict. It is not a crime to discuss your drug problem with employees of licensed drug programs.

Information given to employees or volunteers of licensed drug programs is confidential and cannot be revealed in a court of law. A minor may consult with a licensed physician about a drug problem without the knowledge or consent of parents.

IT IS A CRIME TO POSSESS, MANUFACTURE OR SELL AN ILLICIT DRUG.

## Condominium Popularity Increases

By JULIAN STENSTROM  
Herald Real Estate Editor

Did you know that during the year 1971 about 11 percent of all the living units sold in the United States were condominiums?

Did you know that during 1972 this figure jumped to 30 percent of all homes sold?

And, did you know that before 1973 goes into the history books nearly 50 percent of all the living units sold in this country this year will be condominiums?

So, you ask, "What does all this mean?" Well, for one thing it means that the condominium is clearly a new lifestyle for Americans and it might be as American as apple pie within a few years to come.

Those of you who can remember as far back as the late 1940's might say, "So was the Tucker automobile. It, too, was supposed to become as American as apple pie, but it didn't."

But, wait a minute! Go back and read that third paragraph of this article again. Let me say it again:

Before the end of 1973, 50 percent—that's one-half—all of the "homes" built in the United States during this year will be condominiums.

Now, nobody in the 1940's said that after three years of production Tucker would build half the new cars manufactured in the United States. So, there's really no comparison.

IS THE CONCEPT WORKING?

But, facts are facts and there's no getting away from these home construction figures.

But it does leave us with the big question, "Will it continue?"

And, the answer to that question lies in the answer to this one:

"Is the condominium concept working?"

There are now four condominium projects in the Sanford area—already ready for marketing. Consequently, the condominium concept is new for Sanford and those of you who may be in the market for new homes might like to know more about condominiums before you consider signing on the dotted line. Perhaps what we have to say here might help you make up your mind—one way or the other.

What type of families are buying condominiums? Newlyweds and retirees are the most logical buyers of condominiums—at least that was what was first thought. But, today there are more condominium buyers in the 30 to 39 age group than any other. Another fact: Many, many condominium buyers are single folk.

Why do people buy condominiums?

Probably the great number of buyers are people who like apartment type living but are tired of paying rent. Single folk, new retirees, retirees, people with medium to small families, who do not want the task of lawn maintenance, like the idea of buying condominiums because they have something in which they can build an equity. Also, they have the advantage of deducting taxes and insurance on their income tax returns.

And about that lawn maintenance, condominiums should be real popular in Florida because this state is one of those in which lawn maintenance is a year-round proposition.

A lot of other people buy condominiums because of the security it gives them, environment, recreational and social facilities and activities, among other reasons.

DO BUYERS LIKE THIS LIFESTYLE?

"Okay," you say, "but, do people who buy condominiums really like that type of living?"

We're certain you'd want an honest answer. So, we were referred to a study entitled "Townhouses and Condominiums" published by the Urban Land Institute, Washington, D.C. And, the answer is, yes. About 75 percent of the buyers of condominiums were found generally to be satisfied with condominium living in this particular time of their lives.

A larger percentage of westerners approved of condominium living than easterners. Consequently, it can be said that the single family residence is still the most ideal situation in this half of the United States. But, there's a probability this attitude may change as land costs along with the costs of building materials and labor increase in the east. Too, attitudes toward new ideas seem more acceptable at first to westerners and this may be because prices in the west are usually slightly higher than in the east.

Then, of course, if you're contemplating condominium living, we're confident you'd like to know what people who have experienced it think about the benefits of this type of living.

EASY MAINTENANCE

Naturally, easy maintenance is one of the benefits, or in some projects no maintenance at all. Usually the maintenance is handled by the association of owners to which you usually must belong. The fee you pay each month takes care of maintaining the lawn and landscaping, the social hall and its equipment and furnishings, the swimming pool or pools, tennis courts, shuffleboard courts, etc.

Condominium owners feel that they have invested in something that would give them something back.

While some people wouldn't want to live so close to neighbors, the truth is that most condominium owners appreciate the closeness of neighbors and the security it provides them. Usually, people in condominiums are generally friendly and neighborly in all those projects with good social and activity programs don't provide even loners with much opportunity to be lonely. As one couple put it, "We enjoy being able to walk around in the evenings without fear."

Another thing people like about condominiums is the fact that most of the projects—as they are in Sanford—are brand new or the latest designs, possess the newest of features and appliances, have excellent floor plans, and the whole thing fits into enjoyable contemporary living standards.

# Bank Chief Says Home Loans Are Showing Some Bright Spots

WASHINGTON—The gloomy housing outlook has some bright spots, Eugene H. Adams, president of the American Bankers Association (ABA), said today.

Adams, citing the latest report released by the U.S. Department of Housing and Urban Development (HUD), pointed to major increases by the nation's 14,000 banks in five areas of mortgage lending for one-to-four family homes.

According to HUD figures, banks:

- Originated 59 per cent more in long-term loans for the first six months of 1973 compared to the first half of 1972.
- Originated 31 per cent (\$12.4 billion) of total mortgage loans for the first six months of this year.
- Increased their acquisition of construction loans by 14 per cent over the same 1972 period, from \$3.75 billion to \$4.28 billion.
- Put new commitments on the books during June 73 of \$1.5 billion for construction and long-term loans—an increase of 5 per cent.

Had outstanding commitments of \$7.3 billion for construction and long-term loans at the end of June '73, some 38 per cent above the June '72 total.

Adams, who is also president of The First National Bank of Denver, said it is "particularly gratifying to know that commitments to make future loans are holding up extremely well, since this is a good measure of loans actually being made today."

Banks again rank No. 1 on HUD's compilation of holdings of construction loans through June 73 by the major lending groups.

In order were: banks, \$14.4 billion; savings and loan associations, \$11.7 billion; mortgage investment trusts, \$7.2 billion; mutual savings banks, \$1.3 billion; state and local credit agencies, \$843 million, and life insurance companies, \$389 million.

Adams further said that ABA surveys show that banks have more than \$90 billion invested in municipal bonds.

"Some \$60 billion of these are bonds for roads, sewers, waste treatment facilities, schools, fire and police departments, city hospitals—all the facilities necessary for a community to function," Adams pointed out.

In addition, nearly 10 per cent of banking's \$69 billion in commercial loans outstanding at the end of 1972 was in mobile home loans. According to the ABA, mobile homes now account for 20 per cent of all single-family housing in the U.S. and 75 per cent of all single-family housing costing less than \$20,000.

## Creepy Old Dungeons, Cellars Lose Wine Storage To Closet

By MARIE STANTON  
Copley News Service

Mention wine cellars and an imaginary picture comes to mind of a dark, cave-like limestone cellar in a rambling chateau where the wine bottles are covered with dust and cobwebs weave their way across dim corners.

Well, that's a late-show kind of image, and it's far from the actual way it is with modern wine cellars.

Far removed from the chateau country and even farther from the luxurious world of rambling space, U.S. collectors store their wines Space-Age style. Closets replace cellars, modern refrigeration replaces natural coolness and thick layers of dust and cobwebs just don't develop.

In fact, most wine cellars are spotlessly clean, some so antiseptically ordered they resemble a dispensary. Perhaps this is only natural because many wine collectors are meticulous and treat their wines with great respect.

To call most present-day wine cellars cellars is, in a way, a misnomer. To be more precise they are wine storage areas. Because of the scarcity of cellars, garages, interior broom closets, a wall in the dining room, a kitchen drawer or a corner of the family room all function handsomely. And

when wine collecting becomes serious, an added room or small separate building is today's style. Nevertheless, wine cellar continues to be used to describe a place where wine is stored regardless of its size or design.

Wine storage actually is pretty much divided into two types, although where one ends and the other begins is hard to tell.

Most wine buffs began wine collecting with what is called a convenience cellar and that merely means storage sufficient to hold anywhere from a half-dozen to several cases of wine to be kept on hand for immediate use. It eliminates hurried trips to the store by providing a variety of kinds of wine for a variety of kinds of food and mood.

The convenience cellar can be as decorative or as hidden as desired.

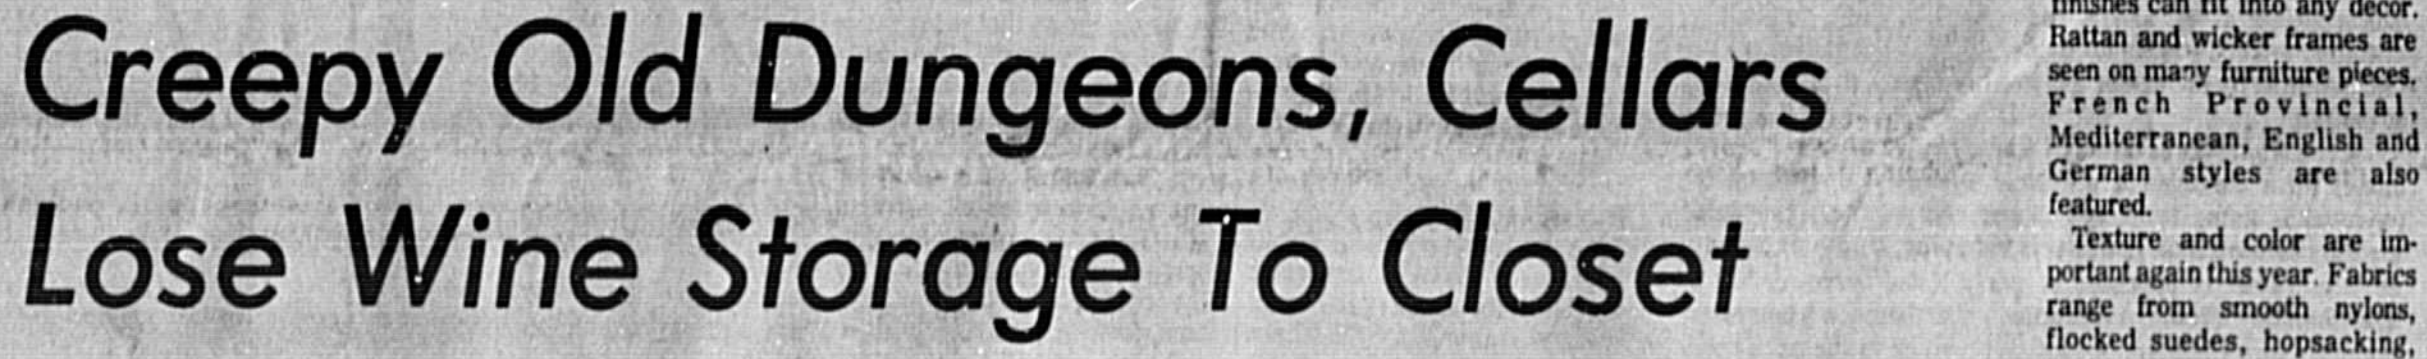

As an energy crisis grips the nation, urban and suburban Americans increasingly take stock of their days ahead. Mr. Average Citizen of any great metropolis views the energy crisis through the lens of his everyday experiences: gasoline to power his car, electricity to light and air condition his home, fuel of his choice to provide heat against winter. If he reflects on agriculture's energy needs at all, his mind probably conjures up a ready image of a hardworking tractor.

Mr. Average Citizen correctly assesses agriculture as being far down the list of society's main consumers of energy. A typical American, for example, annually uses the energy equivalent of about 10 gallons of gasoline just to watch a black and white television set. By that standard, agriculture's on-the-farm consumption of about 150 gallons of gasoline in growing and harvesting the food supply of one person does not seem extravagant. But agriculture's energy requirements are large and they do not end, or begin, on the farm.

Consider fertilizer. Along with advances in such fields as pest control, agricultural engineering, and genetics it has played a vital role in enhancing agricultural productivity. Indeed, authorities state that at least 30 per cent of the increased yields of U.S. grain crops can be attributed to fertilizers.

## Furnishing Trend For New Year

By LOUISE L. GILL  
Extension Home Economics Agent

### Furnishings Trends For 1973

— Billowy, pillow, upholstered pieces; Early American styling; Oriental design; country styles derived from English and French designs.

These were the house furnishings trends evident at the International Home Furnishings Market held in Chicago early in 1973.

Comfort is back, as evidenced by soft, sink-in chairs and sofas that have 17 multi-colored pillows. And the resurgence of Colonial-Early American-Federal styles is tied to the upcoming bicentennial, so we can expect this trend to hold until at least 1976.

Oriental overtones are seen especially in accent furniture. Tables in antiqued color finishes can fit into any decor. Rattan and wicker frames are seen in many furniture pieces. French Provincial, Mediterranean, English and German styles are also featured.

Texture and color are important again this year. Fabrics range from smooth nylons, flecked suedes, hopsacking, tufted velvets, olefins to matelasses and Italian antelope.

Colors featured are smoke, wine, gold, and asparagus. In patterns, antique yellows and whites have contrasting stripes and glaze finish to give richness and dimension.

## Agriculture Sees Lack Of Energy

As an energy crisis grips the nation, urban and suburban Americans increasingly take stock of their days ahead. Mr. Average Citizen of any great metropolis views the energy crisis through the lens of his everyday experiences: gasoline to power his car, electricity to light and air condition his home, fuel of his choice to provide heat against winter. If he reflects on agriculture's energy needs at all, his mind probably conjures up a ready image of a hardworking tractor.

Mr. Average Citizen correctly assesses agriculture as being far down the list of society's main consumers of energy. A typical American, for example, annually uses the energy equivalent of about 10 gallons of gasoline just to watch a black and white television set. By that standard, agriculture's on-the-farm consumption of about 150 gallons of gasoline in growing and harvesting the food supply of one person does not seem extravagant. But agriculture's energy requirements are large and they do not end, or begin, on the farm.

Consider fertilizer. Along with advances in such fields as pest control, agricultural engineering, and genetics it has played a vital role in enhancing agricultural productivity. Indeed, authorities state that at least 30 per cent of the increased yields of U.S. grain crops can be attributed to fertilizers.

## Gardening Is Fun For Small Lots

By DAVID DeVOLL  
Extension Agent

One doesn't have to have a large lot to enjoy gardening. A balcony or patio of a condominium or small lot area under a trailer offer plenty of room for container gardening.

The popularity of raising plants in containers has increased tremendously in recent years. Most all plants can be grown in a container—except tomatoes. Plants in containers can be moved indoors during cold spells or simply for use as an interior decoration.

A container plant is much more dramatic than the same plant when assessed with other plants. A container creates a special setting for a plant and they do not end, or begin, on the farm.

Consider fertilizer. Along with advances in such fields as pest control, agricultural engineering, and genetics it has played a vital role in enhancing agricultural productivity. Indeed, authorities state that at least 30 per cent of the increased yields of U.S. grain crops can be attributed to fertilizers.

**Real Estate  
Question Box**

By JULIAN STENSTROM  
Herald Real Estate Editor

(Editor's Note: If you have a question pertaining to real estate, taxes, mortgages, zoning, planning, etc., please direct your inquiry to Editor, Lifestyles, The Sanford Herald, Sanford, Florida 32771. Be sure you sign your letter. However, upon publication only initials will be used.)

**Editor:**  
What is meant by tenancy by the entirety? This appears on some legal documents which my parents have in their possession and I am not sure what it means.—Mrs. DSB

**Dear Mrs. DSB:**  
If your question pertains to a deed concerning ownership of property in Florida it simply means that your mother and dad own the property completely and the property cannot be sold by either one without the permission or consent of the other. If either your mother or your father should die the surviving spouse is the owner of the property in question. If your parents have any question about this they should consult an attorney.

**Editor:**  
During the course of a real estate transaction who is supposed to furnish a survey of being sold? Is it the buyer or the seller?—RDW

**Dear RDW:**  
Could be either one if a survey is required. It would all depend upon the contract. If the contract calls for the buyer to provide the survey then that would be the buyer's responsibility. If the contract called for the seller to furnish the survey then that would be the seller's responsibility.

**Editor:**  
In several of your real estate columns you have consistently used the term "qualified buyer." What really qualifies a buyer to purchase property and have it financed?—Miss RLL

**Dear Miss RLL:**  
A simple way to put it is that a qualified buyer is one with adequate income and a good credit reputation. Going into a little more detail, however, it's necessary to say that a qualified buyer is one who has various characteristics such as an income sufficient to provide for himself and his family and make his mortgage payments without difficulty, that he has sufficient assets and, as one writer has put it, "a healthy attitude" toward paying his debts. All of these minimize the risk assumed by the lender and greatly lowers the possibility of default.

A common rule of thumb is that a lender will not provide money for a borrower to purchase a home if the mortgage payment is going to exceed 25 per cent of the borrower's monthly income. Also, a lender is not going to provide money for a borrower to purchase property if the borrower has a questionable credit reputation. Further, a borrower probably won't lend money to a newcomer to the area until the newcomer has established himself job wise and credit wise in the community. Consequently, a qualified buyer is one who has adequate income and a good credit standing.

If a mortgage permits his home to go into foreclosure because he did not make his mortgage payments he cannot expect another lender to provide him with money to purchase another home. It's as simple as that.

**Editor:**  
What is really meant by the term, "tight money" when referring to the availability of mortgage money?—DJP

**Dear Mr. DJP:**  
When the demand for mortgage money reaches or exceeds the supply this creates a "tight money" market. It usually forces interest rates to climb and this is exactly what is happening right now in this country and particularly right here in central Florida.

The crash of the market is that here in central Florida, for example, you can easily get mortgage money—if you're willing to pay all the way from 8.25 to 10 per cent for it. But most home buyers aren't willing to pay those kind of interest rates and when the demand for mortgage money increases and the supply increases interest rates will probably come down.

**IMMEDIATE OCCUPANCY**

**HOMES FOR AMERICANS**

BY THE STANDARDS of 10 years ago, this vacation home would be too large and too luxurious. Today, however, it is typical of vacation homes most high in popularity. The wrap-around porch going 28 feet in two directions leaves little doubt that the much outdoor living will take place here. The built-in barbeque in the vast chimney block is in the center of outdoor activity. Four outdoor entrances are provided for making life easy. The formal entrance goes through a paneled trophy room with closet, timbers and a seat. The side entrance is for direct access from living lounge to porch. The kitchen entrance is convenient for outdoor eating. The left side entrance is into the bath and shower. The second floor's two bedrooms make a total of four and a bath there gives the house two. Architect for Plan HA797M is Rudolph A. Matern, 89 E. Jericho Turnpike, Mineola, N.Y. 11501. Anyone interested in knowing the cost of the blueprint can write to him and enclose a stamped, self-addressed envelope. The house has 1,057 square feet on the first floor and 494 on the second.

**Here's How Carpenters Build themselves a Case**

By VIVIAN BROWN  
AP Newfeatures Writer

Carpenters work hard, incur risks and medical bills and then can't always collect their pay. That's the gist of some gripes from many old-timers who have gotten tired of reading how expensive they are.

For one thing, people have no respect for their time, writes a Byron, Mich., carpenter.

"A lady of the house thinks nothing of asking a carpenter to stop at the lumberyard to change something, but she doesn't want to pay for the time it takes to do it. Hours are wasted also in making estimates. While people make up their minds or argue, a carpenter is wasting maybe two or three hours a night. Some ask how much material is needed and how the job is going to be done, and then when they get the estimate, they will do the job themselves."

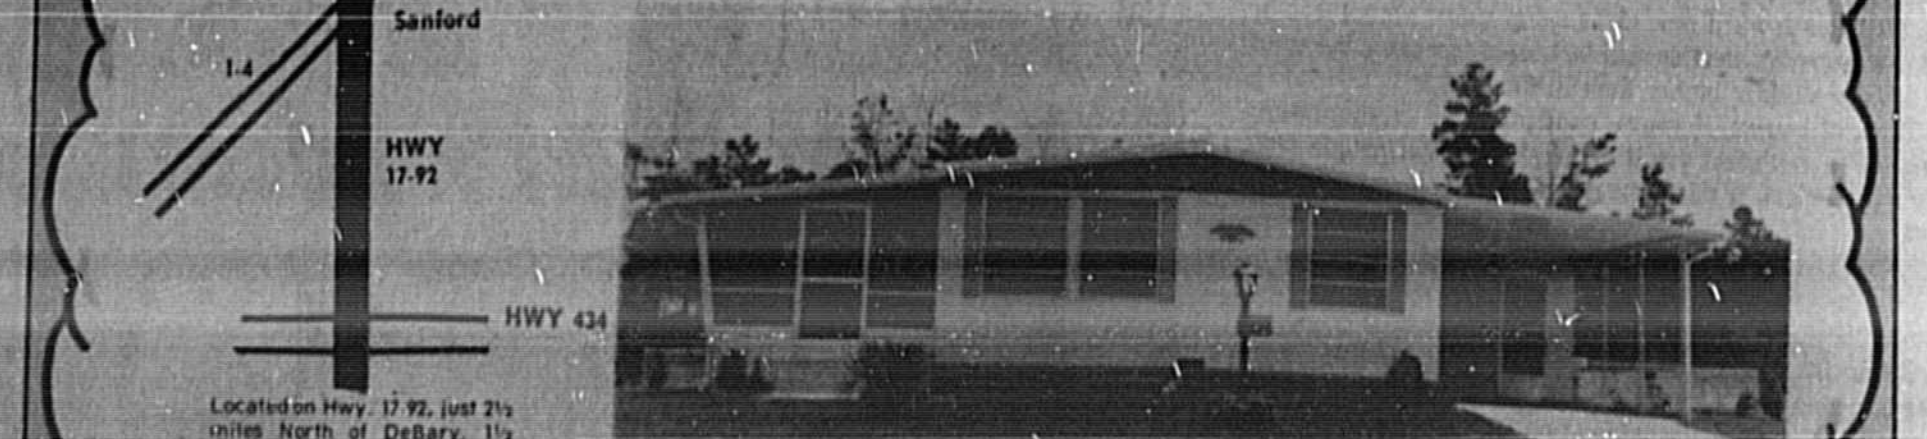

A carpenter "must buy his own tools, keep his own books, pay his own social security tax, unemployment insurance, license for his truck," he goes on. He must lift heavy objects and if he is injured he gets no unemployment benefits. Carpenters are long-suffering, too, he says. They not only listen to the chatter of their clients but of them look over their shoulders as they work. Meanwhile the youngsters are borrowing carpenter tools to work on "their go-carts in the backyard."

There are those people, too, who ask for an estimate on fixing a roof and six months later when it is covered with snow or ice they want it done as an emergency. At that point "it is like a skating rink," he points out. "Sometimes it is impossible to hold a nail in your cold hands."

A Harrison, N.J., carpenter has often incurred big medical bills from back problems that originated from lifting heavy boards. He has often wanted to turn down a particularly difficult job, but the "customer weeps, begs and promises a bonus which is never paid."

The wife of a Chicago carpenter points out that she considers her husband a craftsman who is very underpaid for his beautiful cabinet work for which he charges carpenter's prices.

While it is more practical to buy a replacement window pane cut to size, the sales of glass cutters to home owners are high enough to indicate that many thousands of persons prefer to do the cutting themselves.

It's a rare individual indeed who can do a successful job of cutting a piece of glass the first time. The initial advice, therefore, is to practice on scrap glass before you try precision cutting for an actual window pane replacement.

The measurements of the glass must be slightly smaller than those of the window frame into which it will be placed. Deduct about 1-16th of an inch from each dimension. If the glass fits too tightly in the frame, the slightest expansion or warpage will cause it to crack or break.

Be sure the glass is clean where the cut is to be made. Dirt or grit will interfere with the cutting action. Place the glass on a few layers of newspaper on a flat, hard surface, such as a table or workbench. Use a straightedge, preferably of metal, and put a few drops of kerosene along the line of the cut. Hold the glass cutter in an almost vertical position and start the cut at the part of the glass farthest from you, drawing the cutter towards you. Use a firm pressure and continue moving the cutter so that a line is scored in the glass in a single stroke.

Even if you have made a perfect cut, you must be extra

**Calbert Construction Opens Homes**

By FANNETTE EDWARDS  
Herald Correspondent

DELTONA—Calbert Construction Inc. is holding the grand opening of its new development in Deltona this weekend.

The model homes are on display at Bakerfield, Galgano and Stillwater Streets and the opening will continue Sunday 1-5 p.m.

The public is invited to take a tour of these homes.

All homes have wall-to-wall carpeting, central air conditioning, sliding doors, all electric kitchen with dishwasher, garbage disposal and self-cleaning oven and range hood with exhaust fan, laundry area and full size garage. Living room, dining area and master bedrooms are exceptionally large. And in the larger homes, even a pantry has been included in addition to the many kitchen wall cabinets. Women will be especially pleased with the many closets in all models enabling them to have all the closet space they usually desire.

Two, three and four bedroom homes are available.

The Calbert Construction Inc., is a family owned corporation, with Albert M. Clark Jr. (the father) serving as president; Mrs. Margaret Clark, his wife, as secretary-treasurer; Albert M. Clark III, executive vice-president; Larry E. Clark, vice-president in charge of Field Operations and Terry S. Clark, vice-president in charge of Marketing.

Although Clark has been in the construction business for over 20 years, he did not organize the Calbert Co. until Nov. 25, 1968. The first year of operation the company sold six houses for \$112,000. Today, at the close of the 1973 fiscal year, they have 300 starts with a sales value of over \$5,000,000 and plan another 400 starts during the fiscal year of 1973-1974, ending March 31, worth over \$5,000,000.

Homes are being built in Central Florida in the following locations: Oviedo, Longwood, Tampa, Deltona, Padgett Lake, (just north of Tampa), Gassaway and soon, Winter Springs.

Albert M. Clark III, 31, is graduated from Florida State University with a B.S. degree in Business Administration and has six years of management experience with Radiation, Inc. before joining Calbert, Inc.

Larry E. Clark, 30, is also a graduate of FSU and has been with the firm for two years in charge of Field Operations.

Terry S. Clark, 22, joined the firm this year. He has a B.A. degree from Florida Technological University and a Master's from the University of Wisconsin. He handles Marketing and Customer Relations.

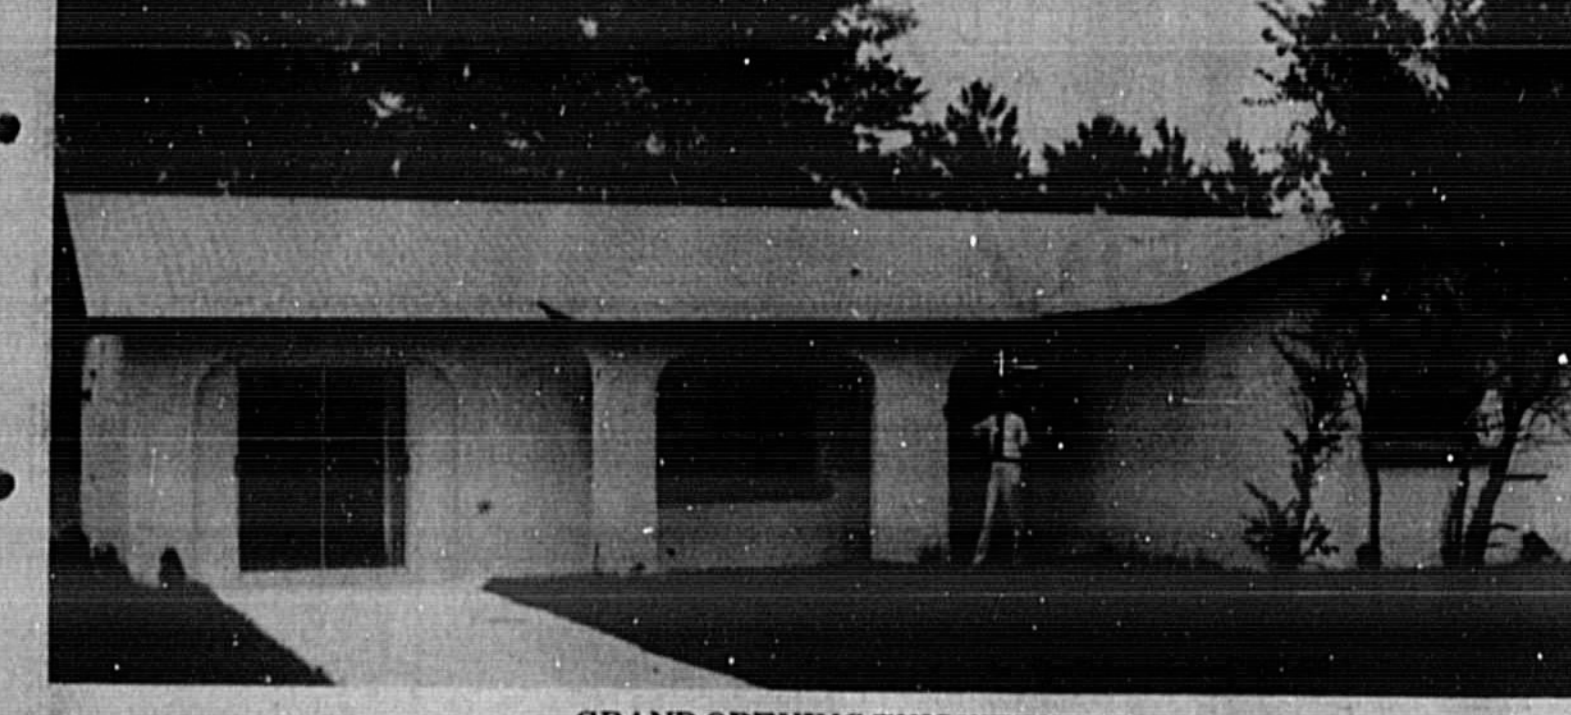

In addition, Calbert Co. employs 30 full-time employees.

Sales Manager for Deltona area is William C. Tilly, formerly of Michigan and Massachusetts and later, Winter Park. He and his wife Betty, live on West Fowler Drive in Deltona.

Tilly attended the University of Massachusetts and Oakland University in Michigan. He has a Real Estate Appraisal, Finance and courses given by the National Institute of Real Estate Brokers. He was in Real Estate business in Massachusetts and Michigan before coming to Florida in 1971.

By ANDY LANG  
AP Newfeatures

Q.—I bought an unfinished bookcase several years ago and never put any finish on it. I've now decided to varnish it. But the surface has become quite dirty and I am wondering the best way to clean it before going ahead with the finish. Also, can I use a semi-gloss varnish on it?

A.—Yes, you can use any kind of varnish on the bookcase. As for cleaning it, wipe it thoroughly with turpentine. If some dirt still remains in the pores of the wood, sand it out.

**The WEEDERS GUIDE**

By EARL ARONSON  
AP Newfeatures

Many trees and shrubs have been hurt by the very wet weather, especially in eastern United States. Even well-established plants suffer and often die in water-saturated soil.

If you know an area often becomes very wet, choose trees and shrubs that can withstand, or even thrive, in swamp-type sites. These include alders, hollies, willows, red or swamp maple, bald cypress, eastern larch and American arbutus.

A plant physiologist, Dr. E. L. Chaudler, of Bartlett Tree Research, points out that excess water can make soluble salts, oxygen deficiencies, and soil nutrient off-balances occur in soil. Often, he explains, nothing can be done for the declining woody plant after symptoms appear.

Ordinary weather doesn't often present problems, but with continuous rain—despite good drainage—many species of trees and shrubs begin to decline. You can improve drainage in some areas by installing subsurface tile or surface drains.

Some tree problems that appear in the crown are due to root troubles. Some stem from jamming roots into a tight space, planting too deep (smothering), or planting too shallow, leading to root freezing in winter or baking in summer.

Poor soil, insufficient food, insufficient water, too much water, unwise grading, changing the water table, or exposure to winds that sway the crown and break rootlets, and drastic temperature fluctuations, are other difficulties.

And when such troubles occur, they leave the tree open to secondary woes, such as infectious fungi, bacteria viruses and harmful nematodes that attack.

LEADERS, heroes now gone... Ten years ago this week President John F. Kennedy spoke in glowing terms before the United Nations general assembly of his dreams that someday would come to pass a cooperative space effort between the United States and the Soviet Union.

Leaders, heroes now gone

Story Photos By DONNA ESTES Herald Staff Writer

Evidence that people can remember every day of the week... Mrs. Mary Bartlink of Longwood was preparing the graves at Arlington National Cemetery every day of the week... 'I was sitting at home with my baby watching television,' recalls Johnie Redditt of Casselberry, 'I was shocked. It was a terrible thing.'

The Cuban Missile Crisis came and went and Americans were proud to be Americans... The president went to Paris, he went to Ireland and he went to Berlin... As 1963 arrived, all seemed well. A new Kennedy baby was expected... The tomb is guarded around the clock, and the guard is changed every hour during the day, every two hours during the night.

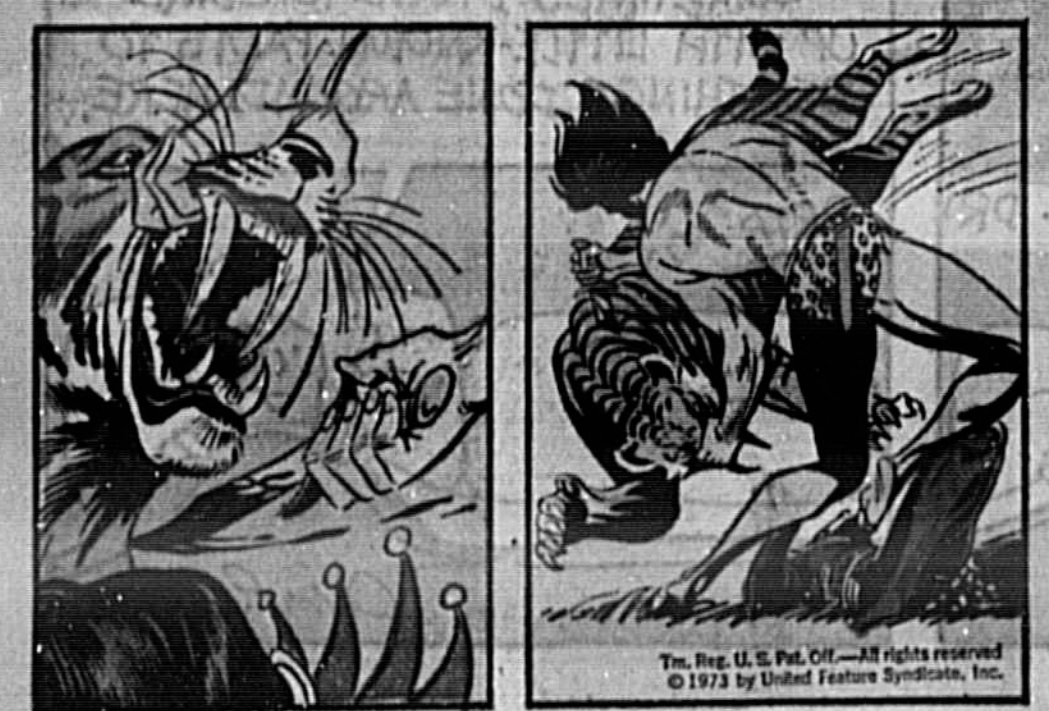

Mr. Lee... Mrs. Lee... The left and further down the slope is a simple cross and marker in Robert Kennedy's honor... This speech is the one Kennedy delivered when Martin Luther King was assassinated.

Politics is a noble profession and an honorable one... The Cuban Missile Crisis came and went and Americans were proud to be Americans... As 1963 arrived, all seemed well. A new Kennedy baby was expected... The tomb is guarded around the clock, and the guard is changed every hour during the day, every two hours during the night.

**DID YOU KNOW?**

Douglas William Johnston, in 1960, found \$240,000 in \$10 and \$20 bills on a Los Angeles street. He located the rightful owners and returned all the money.

In 1955, Philip Yuzdzik ate 77 hamburgers at one sitting in Chicago.

The tallest man ever to play basketball was a Russian, 7'10" tall in Russia in 1956.

The heaviest bell in the world was cast in 1733 in Russia. It weighs 216 tons and is over 19 feet high. It has been in the Kremlin in Moscow since 1836.

**ABOUT ANIMALS**

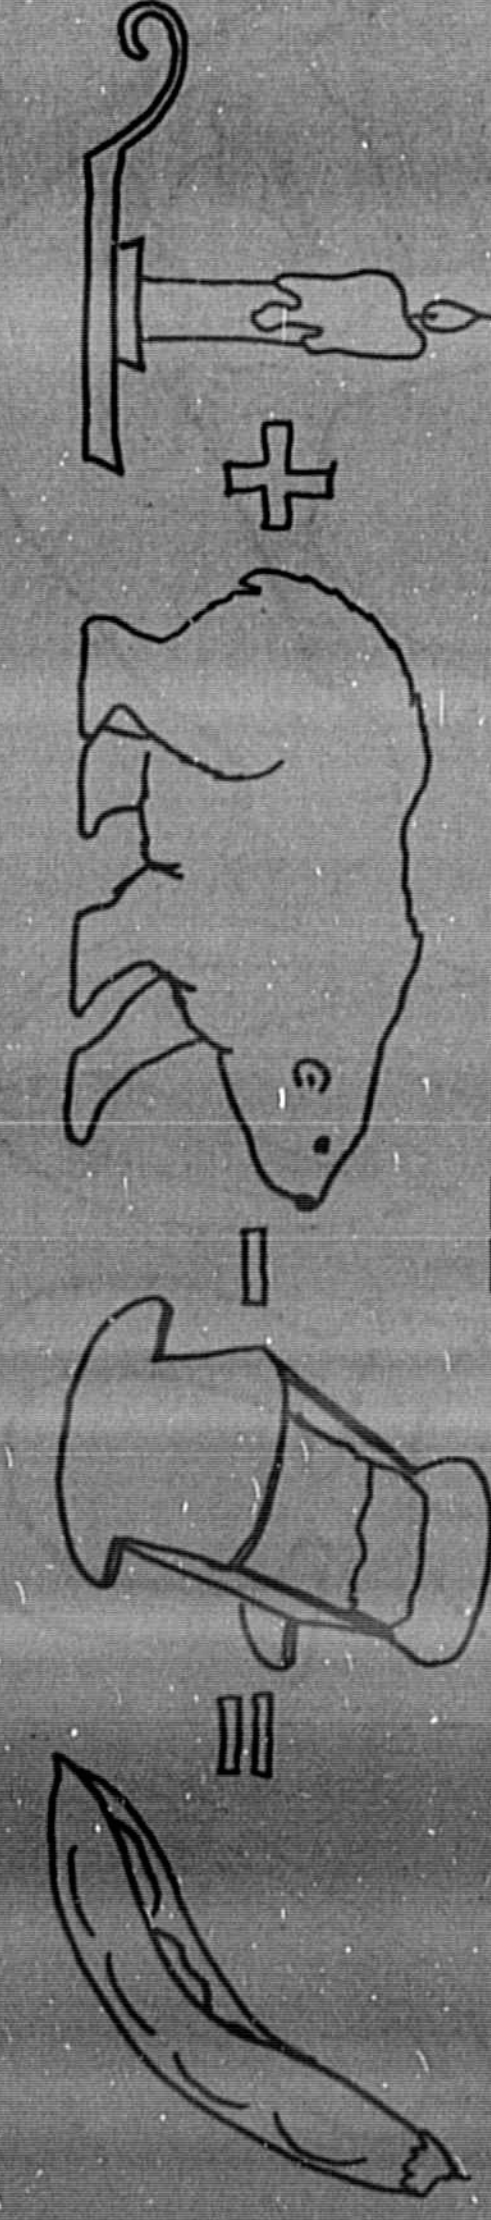

**WALRUS** — The Walrus is found above the Arctic Circle and lives on ice over deep water far from land. Walrus are very large, often weighing over 2000 pounds, and have tusks which are used like a rake while feeding. They eat all forms of marine life on the ocean floor, sometimes diving as deep as 500 feet to feed. Eskimos use walrus tusks and bones making ivory and the animal for either food, clothing or utensils.

5 ACROSS: 1

4 DOWN: 2

5 DOWN: 3

7 ACROSS: 4

6 DOWN: 5

1 DOWN: 6

3 DOWN: 7

REBUS: A flower with a bee on it.

ANSWER: ROSE

### MINIfacts...

THE ENGLISH BOBBY IS NICKNAMED AFTER SIR ROBERT 'BOBBY' PEEL, FOUNDER OF THE LONDON POLICE FORCE.

REBUS: A flower with a bee on it.

ANSWER: ROSE

### NATURE COLORS

#### FLYING FISH...

COLOR THE FLYING FISH BLUE

THE FLYING FISH DOESN'T FLY THROUGH THE AIR BY FLAPPING ITS 'WINGS' LIKE A BIRD DOES. ITS LARGE FINS ACT LIKE GLIDER WINGS WHEN IT LEAPS OUT OF THE WATER AND SAILS THROUGH THE AIR.

### THIS WEEK'S TOP PRIZE QUESTION

CEREAL MAKERS MAKE PUFFED WHEAT IN SPECIAL OVENS THAT LOOK LIKE METAL TUBES. WHEAT KERNELS ARE SEALED IN THE TUBES AND HEATED UNTIL THEY ARE VERY HOT. THE HEAT CHANGES THE MOISTURE IN THE KERNELS INTO STEAM. THE PRESSURE OF THE HOT AIR IN THE SEALED TUBES KEEPS THE STEAM FROM BURSTING OUT OF EACH KERNEL. WHEN THE KERNELS ARE JUST HOT ENOUGH, THE CEREAL MANUFACTURERS QUICKLY OPEN THE TUBES TO LET OUT THE HOT AIR. THE HOT KERNELS SUDDENLY EXPLODE AND PUFF INTO 'PUFFED WHEAT'.

COMPTONS (Sponsoring)

HEY, GROUP!

### DEAR POLLY

My Pointer is for those who like to be sure their dogs are always cozy and warm. We tacked a piece of rubber inner-tubing across the doorway of our dog's house and cut a vertical slit in the center. This stretches nicely so the dog can go in and out, but closes tightly enough to keep out the cold winds and moisture. — ANNA.

Two screws fell out of a cabinet door. Having no plastic wood on hand, I dipped the screws in all-purpose white glue and then I screwed them back in very quickly. This worked wonderfully. — LILIAN.

I had a piece of perforated board framed on the back, painted it the color of the kitchen walls and hung it near the stove. Many small utensils are kept hanging there so the needed one can be grabbed in an instant. — RUTH T.

I needed a large trivet to put under a roast to keep it out of the drippings. I used a 10-inch round aluminum pan. Holes were pierced to make a circle around the bottom of the pan and it was inverted under the roast in the roaster. The pan's rim helped give the needed height and it worked like magic. — RUTH.

A good way to store spools of thread is to glue golf tees, evenly spaced, to the bottom of a cigar box and put the spools on the tees after the glue has dried. — L. L. P.

Polly pays \$1.00 for every idea used. Send them to her, c/o this newspaper.

### DEAR POLLY

I have found that I can often use a twin-size spread as a coverlet on a full-size bed if a dust ruffle is also used. — MAX-INE.

When wrapping fragile objects it works beautifully to put some small inflated balloons around the object to keep it from jarring around in the box. — KATHY.

This is good to a point, but I would not depend on the balloons for the sole protection. Do wrap well and with thick enough covering to minimize the danger of breakage. — KATHY.

If you want to make pretty and different coasters or patches, cut a desired shape out of felt. The piece would be larger for coasters than for patches. Stitch around the edges with a blanket stitch and then use an outline stitch to embroider your last initial in the middle. — LEANNA.

### Flower Touches

Capture the beauty of wild flowers forever in embroidery. Pattern No. 2094 has hot-iron transfer for 7 motifs; color chart.

Send 60¢ with name, address, pattern number and size to NEEDLEWORK (c/o this newspaper), Box 4388, Midtown Station, New York, N.Y. 10018.

## Watergate Hearings Resume

# Mitchell Ordered Wiretap: Hunt

WASHINGTON (AP) — E. Howard Hunt Jr. testified today that Charles W. Colson was among those approving the "Gemstone" intelligence scheme that included the Watergate wiretapping.

Hunt, in a statement prepared for the Senate's resumed Watergate hearings, said he understood the Gemstone counter-intelligence plan was requested by former Atty. Gen. John N. Mitchell, former Nixon campaign deputy Job Stuart Magruder and ousted White House

counsel John W. Dean III.

"Later I learned that Charles W. Colson, special counsel to the President, had approved it, too," Hunt said.

Colson has denied any advance knowledge of the Watergate wiretapping. In a private session with the Senate Watergate committee, Colson refused to answer questions on grounds he might incriminate himself.

Hunt, a 21-year veteran of the Central Intelligence Agency, said Colson recommended

him for a job on the White House staff in 1971 because there was a need for his skills as a spy.

He said he and G. Gordon Liddy arranged a break-in at the office of Daniel Ellsberg's psychiatrist in September of that year because "of the belief that Dr. Ellsberg... his associates were providing classified information to the Soviet Union."

He said former White House aide Egil Krogh approved that break-in.

Later, after Liddy moved from the White

House staff to President Nixon's re-election campaign, Hunt said he and Liddy designed a budget for a large-scale counter-intelligence program requested by Mitchell, who became director of the re-election campaign.

Hunt said the Watergate burglary grew out of the Gemstone intelligence scheme.

Hunt, who pleaded guilty to wiretapping, burglary and conspiracy in the Watergate case, is seeking to have his guilty plea set aside and all charges against him dropped.

## The Sanford Herald

## \$10,000 Reward Offered In Air-Flow Arson Case

By DONNA ESTES  
Herald Staff Writer

CASSELLBERRY — A \$10,000 reward was offered today by O. R. Cousineau, owner of Air Flow Designs, for information leading to the arrest and conviction of the arsonists who set fire to and destroyed 25 company vehicles and property worth \$150,000 last Wednesday morning.

Cousineau said the reward has been posted in the hope of curtailing the high incidence of "organized harassment and violence now occurring in the building industry of Central Florida."

Cousineau said several prime suspects are undergoing questioning at this time. "We do feel, however, it is the work of organized professional destruction experts," according to an Air-Flow release.

"If the antics of professional organized criminal violence are allowed to go unchecked, further illegal acts will be

planned and executed on others," Cousineau said, "and this will eventually result in the tragic loss of human life as well as property."

The blaze which reached 150 feet high in the early morning

hours Wednesday was started by puncturing holes in the vehicles' gasoline tanks and setting them afire, Deputy State Fire Marshal Earnest Wright found last week.

The fully-equipped trucks

were kept in two compounds separated by a fence which was not harmed.

Company officials continued to deny today reports that the fires may have been the result of recent attempts to unionize

the business. Everything humanly possible is being done to seek the immediate apprehension of the criminals responsible, Cousineau said police authorities have assured.

## Property Owners To Protest Zoning

By DONNA ESTES  
Herald Staff Writer

ALTAMONTE SPRINGS—Palm Springs Drive property owners are expected to appear en masse at the 4:30 p.m. council meeting Tuesday to protest the proposed annexation and rezoning of the Cook parcel at Palm Springs Road and Highland Avenue. The Cook property is one of five tracts considered for annexation and rezoning in a series of public hearings.

The others are: Deep South on SR 431 with industrial zoning; Republic Service Corp., one lot left out of the original annexation on SR 436; west of the Barnett Bank; the Jackson-Hatton property on Sand Lake Road and SR 434 with neighborhood commercial zoning requested for a retail outlets and six lots on SR 436 at the end of Ronnie Drive on which general commercial zoning is asked.

Palm Springs Road residents in the unincorporated territory 10 days ago met to plan strategy to stop annexations into their area and rezoning by the city of Altamonte Springs. At the meeting the residents insisted the city is changing the residential character of their neighborhood.

The Cook parcel's proposed new zoning is professional office district.

It will be reported that the county commission has set a joint meeting with the Altamonte Springs council for 10 a.m., Friday to discuss the community's road situation and the I-4-SR 436 interchange.

Last week, County Commissioner Greg Drummond agreed with Mayor Lawrence Swofford that the currently planned interchange modifications will not provide a solution to the traffic problem there. Drummond suggested a federal-state financed cloverleaf as the answer while Swofford suggested elevated fly-over left turn lanes which, he said, would require purchase of no additional right-of-way.

## Accidents Claim 2 In County

The Florida Highway Patrol reported at least 14 persons died in traffic accidents on state roads over the weekend, including two from Seminole County.

Diana Echaniz, 35, of Altamonte Springs, was killed Saturday when the car in which she was riding ran into the rear of another vehicle near Orange City.

And Johnny Dale Browick, 23, of Longwood, and Marlene Keith, age and address not given, were killed Friday night in a collision at the intersection of SR 200 and SR 18 in Bradford County.

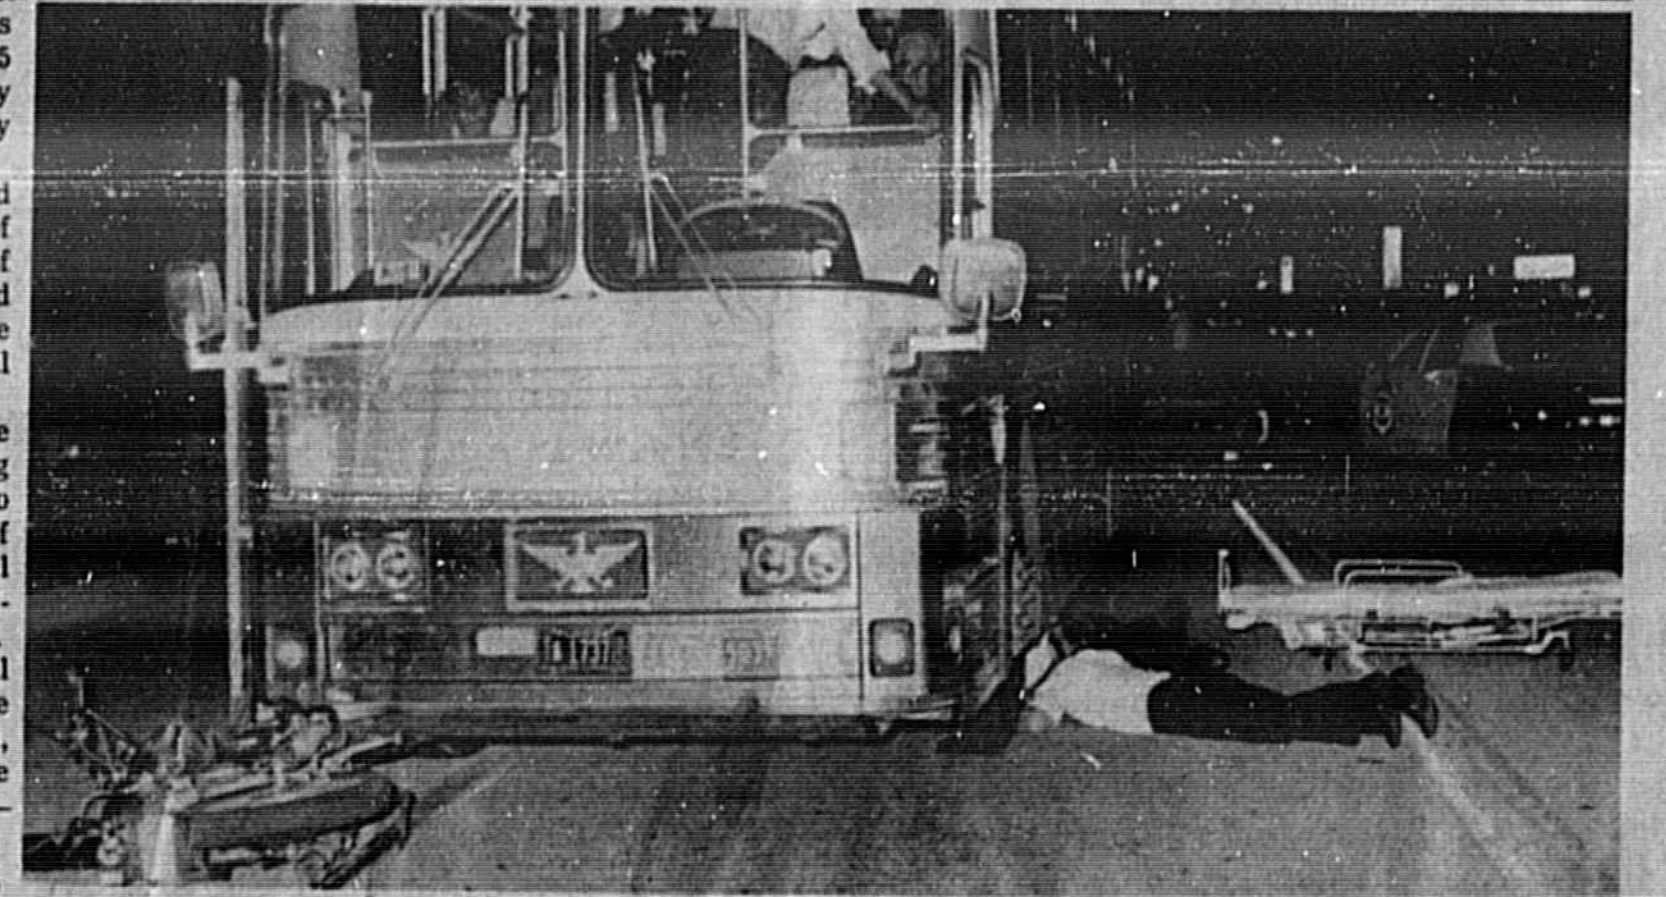

Troopers said Gary Lee Lewis, 18, of Orlando, was killed when his car smashed into another vehicle in Orange County. Identicalities of two persons killed in the second vehicle were not released pending notification of relatives.

Troopers said other weekend victims included: Fred Jackson Holland of Englewood, killed Sunday in Sarasota when his car flipped rounding a turn.

Mary Burch, 27, of Starke, was killed early Sunday when struck as she stood in the south-bound lane of State Road 24 in Waldo.

Catharine Barnett, 39, of Tampa, killed Sunday when a car being driven by her husband was hit by a truck while turning into the driveway of their home.

Debra Mota, 16, of Orlando, who died Sunday when another vehicle pulled in front of the car in which she was a passenger.

FRED PENZETTA, 43, of 511 Hickory Wood Drive, Altamonte Springs, is in fair condition today at Florida Hospital, Winter Park, despite suffering multiple injuries late Saturday night when he was dumped from his motorcycle and thrown beneath an oncoming Trailways Bus on South U.S. 17-92. Penzetta was rescued by Herndon Ambulance attendants, who rushed him to Seminole Memorial Hospital, then

transferred him to Florida Hospital. Police charged Freddie L. Padgett, 23, 2423 Orange Boulevard, Sanford, with striking Penzetta's Honda 450, causing the mishap. Padgett was released Sunday from City Jail on \$1,500 bond on charges of reckless driving, driving under the influence, driving on a revoked license, and resisting arrest.

(Herald Photo by Bob Lloyd)

## Service Station Managers Complain Of Short Profit

By JEAN PATTESON  
Herald Staff Writer

Service station managers in the Seminole county area, with few exceptions, are singing the same sad tale about Phase Four price controls adversely affecting their businesses.

"It's terrible. We're open shorter hours and can't make any profit. Unless changes come soon about 75 per cent of service stations will be out of business before long," predicted the manager of Willis Amoco on U.S. 17-92 and Lake Mary Boulevard.

"We're not at all happy," said manager of Butt's Texaco Truck Stop in Sanford. "Although we haven't been forced to close down, we can't make a decent profit."

Spokesman for Don's Gulf Service in Deltona said for the past two Sundays the station has had to close. "We're not doing too well," he said. "We had to lower our prices while the oil companies raised theirs."

The manager of Oviedo Texaco had the same complaint. "No way can we make a

hire the help they need now their profits are so reduced.

Service station operators are also finding it impossible to

hire the help they need now their profits are so reduced.

Manager of J&F Standard in DeBary complained, "It's

terrible. I had to cut back two cents per gallon and can't afford help. I'm running the place by myself." He has also had to cut back from being open seven days a week from 7 a.m. to 9 p.m. to closing early on Saturday, and not opening at all Sunday.

The 438 Citgo station in Altamonte Springs also reports having to cut down on hired help.

Two local stations said they were unaffected by the price controls. Spokesmen for Lake Mary American and DeBary Texaco both said they were not being forced to close early or discontinue help.

S & H Exxon Car Care on the corner of SR 436 and Hwy. 50 is also unaffected. "I'm the largest in Orlando so I don't have the problems the smaller operators are facing," said the manager.

Spokesmen for a national gasoline retailers association may spread across the country unless dealers get immediate relief from Phase 4 price controls.

## 'Pour Me Another, I've Got A Test'

By J. RICHARDS  
Herald Staff Writer

When dad comes home after work and pops the top on a tall cool one, he never thought Junior might be doing the same thing—he's in school at Florida Technological University, and they don't have beer there. Right?

Wrong! Today, the school's much-delayed Rathskellar opened to a waiting line of students, most of whom just recently became eligible to "sip suds" in the State of Florida, and as of press time it was still packed.

The harder lot of students at the school may now begin—not end—their round of daily classes with a reasonably priced cup of beer, along with sandwiches, nuts, and other Rathskellar usuals. College kids always did have weird habits.

The "Rat" as it is affectionately called on college campuses throughout the U.S. will be open as the sun comes up every day at 7 a.m. but Sunday. On weeknights and Sunday it'll close its doors at 10 p.m., but the chugging will continue to midnight during the three weekend evenings, reports Director of Auxiliary Services Jim Eller, who has the license for the school to operate the pub.

## AROUND THE CLOCK

By John A. Spolski

Reminder Time...to Longwood City Councilman Bill Kloosky. Dig out our edition of August 15, "Longwood To Relocate Health Clinic," at which time you were reported as having indicated that "I expected this, and have told my colleagues to be ready Thursday to vote in the best interests of the people."

There were 700 residents who signed a petition to retain the Longwood medical clinic at its present location. Why then is it to be moved?

As a matter of fact, Wednesday, Sept. 26 will be the last day for this operation in Longwood. Thereafter, the folks who utilize these facilities will have to journey to the Oviedo medical clinic.

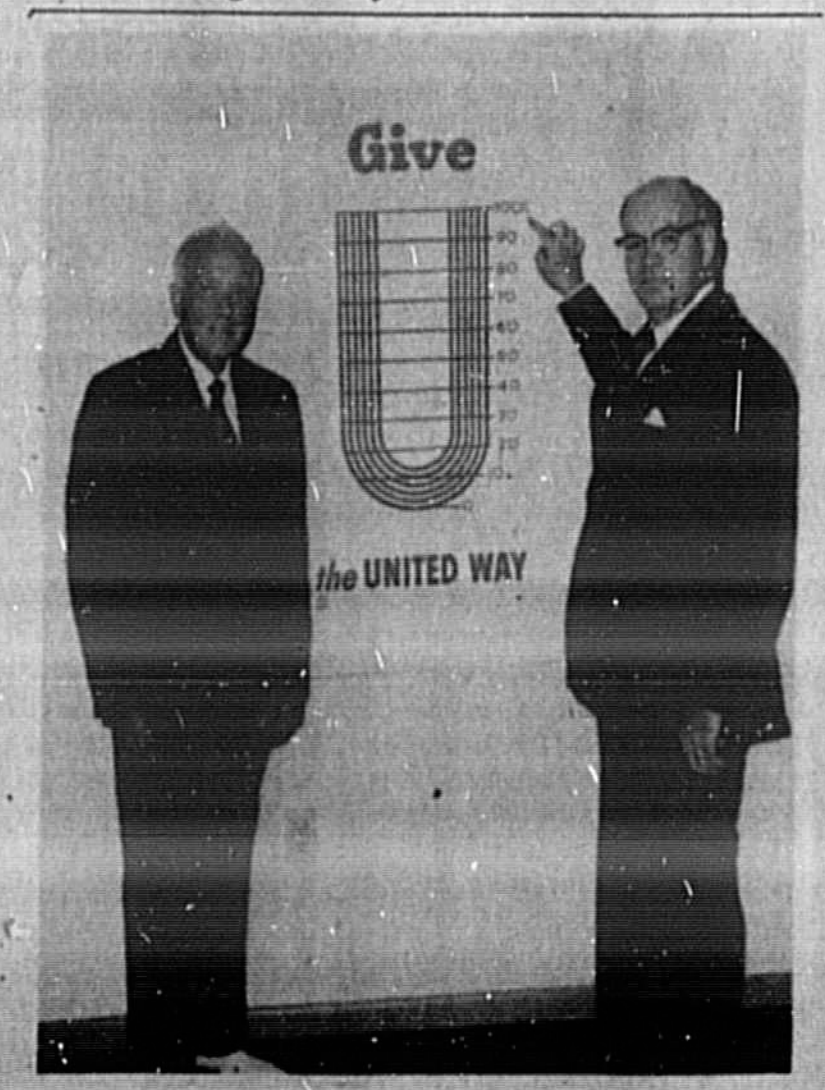

Getting back to that August 15 article... "Certainly, you can't ignore a petition of that strength (700 names)," Kloosky said, adding he will recommend the city rescind its Oct. 1 eviction deadline.

What happened?

For the record, at the Longwood city council meeting of Sept. 13, Longwood Councilman Williamson requested council to withdraw the request made to Seminole County to vacate the building.

The motion died for a lack of a second.

What happened?

AIMING FOR TOP IN UNITED FUND GOAL MELVIN R. Ziegenfus (right), president of the Southeast Bank of Deltona, has been named chairman for the Deltona area of the United Fund drive this year, with Harry Seibert, public relations director of the bank, as his co-chairman. There are 14 worthwhile agencies which comprise the United Fund and the goal set for the Deltona area is \$5,000.

(Charles Edwards Photo)
